Acknowledgments

Teachers, scientists, parents, and adult volunteers inspire and encourage students to explore and investigate their world through hands-on research. Those of you who work with these young people are rarely recognized and can never be adequately thanked. Without you science projects and science fairs would not be possible.

The Georgia Science and Engineering Fair and Science Service applaud your commitment and appreciate your hard work. We sincerely hope that our efforts to enhance the Rules will serve you in working with students.

Important Dates

- October 3, 2008 Deadline for GSEF Regional Fairs to return GSEF affiliation papers
- November 3, 2008 Quotas and Applications will be sent to all Regional affiliated fairs if all fair affiliation papers are received on time.
- February 28, 2009 **Last date a GSEF Regional Fair may be held.** If held on this date, ALL COMPLETED PAPERWORK will be due in the GSEF office by 5:00 PM on Wednesday, March 4. No exceptions can be made.
- March 4, 2009** **DEADLINE FOR ALL APPLICATIONS** to be received from Regional Fair Directors for the 61st Georgia Science & Engineering Fair. REGIONAL FAIR DIRECTORS MUST MAIL ALL OF THEIR STUDENTS' APPLICATIONS TO US IN ONE PACKET. **(No exceptions will be made to this deadline due to short turn around time!)**

Future GSEF Dates

~ Dates are subject to change ~

April 1 – 4, 2009 Athens Classic Center, Athens, Georgia
Future dates TBD

Future ISEF Fairs

Reno, Nevada, May 10 –16, 2009
San Jose, California, May 9 –15, 2010

What is the Science and Engineering Fair?

The Georgia Science and Engineering Fair (GSEF) is one of a number of learning experiences that help young people meet the challenges of the future. It provides a stage from which the junior high and high school students of Georgia can demonstrate their serious contributions to the advancement of society and our way of life.

By participating in the Fair, students learn how to isolate important problems and how to attack and hopefully solve problems all within the framework of organized, logical thought and study. The local science fair provides the initial opportunity for students to exhibit their research projects. If the projects show merit, they may be entered in a district fair. First and some second place winners in district fairs are then eligible to be invited to compete in the GSEF.

At all of these fairs, the student's work is judged by professional scientists who look not only for an attractive functional presentation, but more importantly for the contribution the work has made to new information and for the basic understanding the students have of their research. Please keep in mind that in any competition there is always a small degree of subjectivity and inadvertent inequities may occur in judging. Please remember the decisions of the judges are final.

We hope that you will participate in the 61st Georgia Science and Engineering Fair and that this experience will encourage you to help meet the challenges of tomorrow. Should you wish to have a copy of this book please visit our website at www.uga.edu/oasp and print a copy. **Additional print copies are not available.**

2009 Georgia Science and Engineering Fair Members

To Be Determined

Special Awards Chairperson

Dr. Joseph Hughes

Georgia Institute of Technology
Professor & Associate Chair
Electrical & Computer Engineering

Dr. Robert Matthews

University of Georgia
College of Agriculture & Environmental
Science
Professor, Entomology Department

To Be Determined

GSEF SRC/IRB Chairperson

Mary Lue Walser

Georgia Junior Academy of Science
Executive Director

Gail Sinkule

Georgia Science Teacher's Association
President

Wendy Joiner

Georgia Science Teacher's Association
President-Elect

Dr. Steve Pruitt

Georgia State Department of Education
Curriculum Director

Barbara Ferguson

Georgia Council of Teachers of Mathematics
President

Georgia Policy on Regional Fairs:

All GSEF affiliated fairs must admit any eligible student regardless of school organization including: public, home, private, magnet and charter schools in accordance with state and federal laws. This assures equal access for all of Georgia's students. A student can only participate in one Regional Fair. If project involves a team then they must participate in the assigned Regional Fair of the designated "Team Leader".

Public Schools - Must attend Regional Fair where school is located.

Private Schools - Student must attend Regional Fair where school is located.

Charter Schools - Must attend Regional Fair where school is located.

Home School - Must attend Regional Fair where place of residence is located.

No exceptions are allowed.

Please visit our website at www.uga.edu/oasp to see a complete listing of all Regional Fairs to find out which Regional Fair your county/school must attend.

GSEF Schedule of Events

~ This schedule is tentative and subject to change without notice ~

Wednesday, April 1, 2009

5:00 p.m. - 8:30 p.m.

Exhibit setup / Tour sign-up- Exhibit Hall

Thursday, April 2, 2009

7:30 a.m. - 10:00 a.m.

Exhibit setup / Tour sign-up - Exhibit Hall

10:00 a.m. - 1:30 p.m.

Judges' Initial Inspection of Exhibits - Exhibit Hall

ONLY JUDGES AND OASP STAFF ARE PERMITTED IN THE EXHIBIT HALL. All materials to be used by Exhibitors during judging must be in place. Electrical items that can be operated in an unattended mode must be turned on at this time. Judges will review projects before students report to formal interviews beginning at 1:30 p.m.

10:00 a.m. - 1:30 p.m.

Exhibitors free time for lunch, hotel check-in, etc.

1:30 p.m. - 4:30 p.m.

Exhibitors at Projects for Interviews - Exhibit Hall

Round 1 interviews with Exhibitors. All Exhibitors should be at their exhibit. At this time students should be prepared to answer questions, ask questions and discuss their project with the judges. Exhibitors & Judges ONLY. * **Parents/chaperones, please designate a place on the EXTERIOR of the Classic Center to meet your student(s) after 6:30 p.m. NO WAITING IN THE INTERIOR OF THE BUILDING IS PERMITTED DUE TO FIRE CODES.**

1:30 p.m. - 6:30 p.m.

Parents/chaperones free to explore downtown Athens

4:00 p.m. - 4:30 p.m.

BREAK - Students should bring money for snacks.

NO PARENTS/CHAPERONES WILL BE PERMITTED IN THE BUILDING AT THIS TIME DUE TO THE VOLUME OF STUDENTS WHO WILL BE IN THE HALLS - THIS IS A FIRE CODE ISSUE.

4:30 p.m. - 6:30 p.m.

Exhibitors at Projects for Interviews - Exhibit Hall

Round 2 interviews with Exhibitors. All Exhibitors should be at their exhibit. At this time students should be prepared to answer questions, ask questions and discuss their project with the judges. Exhibitors & Judges ONLY.

6:30 p.m.

FREE TIME!

Exhibitors and their parents/chaperones are free to enjoy dinner and explore Athens. Your commitment for the day is over.

Friday, April 3, 2009

9:00 a.m. - 7:00 p.m.

Exhibit Floor Open to the General Public

9:00 a.m. - 4:00 p.m.

Tours

For exhibitors/parents/teachers to visit various facilities of the University

4:00 p.m.

Free Time for the Remainder of the Evening

Saturday, April 4, 2009

7:30 a.m. - 9:30 a.m.

Exhibit Floor Open to the General Public

10:00 a.m. - 1:30 p.m.

Awards Ceremony - Classic Center Theatre

Exhibits cannot be removed until the conclusion of the Awards Program

1:30 p.m. - 3:00 p.m.

Project Teardown

All exhibits must be removed by 3:00 p.m. Any exhibits left in the Exhibit Hall will be removed by the clean-up crew. NO EXCEPTIONS WILL BE MADE.

Awards Program

Saturday, April 4

All of those interested in the Fair, including families and friends of participants, are invited to attend the Awards Ceremony to be held at the Classic Center Theatre. Awards will be announced at this time and special awards will be presented to exhibitors of meritorious projects. All awards must be picked up at the awards ceremony. They will not be mailed to participants. **If you cannot attend, please designate someone to pick up awards you might win and to remove your display.**

Grand Awards

Exhibitors of the most outstanding projects will be awarded *Grand Awards*. Of these, one each in the Biological Sciences, Physical Sciences and Team Projects of the Senior Division will receive expense paid trips to the 60th International Science and Engineering Fair in Reno, NV 2009.

PHOTO SESSION: Photos will be taken of Top Grand Awards, Junior Division Winners, State Recognition winners and ALL of Georgia's ISEF Representatives immediately following the ceremony.

Special Awards are given each year by government, professional, educational organizations, colleges, universities and individual sponsors. They provide internships, books, equipment grants, scientific field trips, certificates, scholarships and monetary awards to selected exhibitors and teachers. These awards are tentative and are subject to change until the selection is made during the Georgia Science and Engineering Fair based on the projects exhibited at the Fair. Current years' awards will be listed in the 61st Georgia Science and Engineering Fair Awards Program. We would like to thank the following for their support in the past:

Advanced Academy of Georgia	Georgia Institute of Industrial Engineering - Atlanta Chapter
American Association for Clinical Chemistry South East Region	Georgia Junior Academy of Science
American Cancer Society	Georgia Pharmacy Association
American Chemical Society	Georgia Power Award
American Institute of Aeronautics & Astronautics	GSEF Grand Prize
American Meteorological Society	Georgia Seagrant Frederick A Kalber Memorial Award
American Proteins Inc. Award	Georgia Society of Professional Engineers
American Society for Microbiology Southeastern Branch Award	Georgia Speech, Hearing and Language Association
American Society of Agricultural Engineering, Georgia Section	Georgia Tech School of Biology
American Statistics Association Award, Atlanta Chapter	Georgia Tech School of Electrical & Computer Engineering
American Water Works Association - Georgia Section	Georgia Textile Education Foundation, Inc.
ASM Young Materials Engineer Award	Georgia Veterinary Medical Association
Armed Forces Communications & Electronics Association	Georgia Veterinary Medical Auxiliary Association
Association for Women GeoScientists	Georgia Water & Pollution Control Association
Atlanta Gas Light Company - Vehicle Fuel Research Award	Greater Atlanta Veterinary Medical Society
Atlanta Section Society of Automotive Engineers	H.O. Lund Entomology Club
BellSouth Telephone Company Award	Herbert Hoover Young Engineer Award
Discover Life In America - GSMNP ATBI Award	Inspiring Excellence Merit Awards - students & teacher
Discovery Young Scientist Challenge Award	Institute of Industrial Engineers -Northeast Georgia Chapter
Eastman Kodak Company - Photographic Award	Intel Excellence in Computer Science Award
ECE Student/Faculty Committee of GA Tech Engineering Award	Intel Excellence in Environmental Health and Safety Award
Emory University Chemistry Department Award	Iota Sigma Pi Promethium Chapter
GAMES Student of Promise Award	Jackson EMC Leadership Award
Gamma Sigma Delta - UGA Chapter	Library & Internet Research Work Award
Georgia Archaeology Award	Medical Association of Georgia
Georgia Association of Plant Pathologist	Medical College of Georgia Award
Georgia Chapter, Soil & Water Conservation Society	Medical College of Georgia School of Nursing
Georgia Council of Teachers of Mathematics	Mercer University Chemistry Department
Georgia Dental Association - Excellence In Science Award	Mercer University Engineering School
Georgia DNR Environmental Protection Division	Mercer University Environmental Science Program
Georgia Environmental Health Association	Mercer University School of Medicine Award
Georgia Engineering Foundation Award	MERIAL Biotechnology Award
Georgia Geological Society - Atlanta Section	MERIAL ISEF 9 th Grade Student of Promise
NACE International Award	National Aeronautics and Space Administration

National Association of Biology Teachers
National Council of Teachers of Mathematics
National Youth Science Camp
NOAA-Gray's Reef National Marine Sanctuary
Phi Kappa Phi - UGA Chapter
Pi Alpha Excellence in Chemistry Award-Emory University
Scientific American Subscription Award
Sigma Delta Epsilon
Sigma Xi Society, Center for Disease Control Chapter
Sigma Xi Society, University of Georgia Chapter
Society for In Vitro Biology
Society of Automotive Engineers Award - Atlanta Section
Soil and Water Conservation Award - Georgia Chapter
Target Store Focus on Family Award
Textile Education Foundation Award
UGA Artificial Intelligence Program Award
UGA Beta Beta Beta Biological Honor Society
UGA Biological & Agriculture Engineering
UGA College of Agriculture & Environmental Sciences
UGA College of Family & Consumer Sciences
UGA Department of Botany
UGA Department of Cellular Biology

UGA Department of Computer Science
UGA Department of Crop and Soil Sciences
UGA Department of Food Science & Technology
UGA Department of Geology - Geosciences Award
UGA Department of Mathematics
UGA Department of Microbiology
UGA Department of Physics & Astronomy
UGA Department of Statistics
UGA Eco-Reach Environmental Achievement Award
UGA Foundation Scholarships
UGA Warnell School of Forest Resources
US Air Force - Aerospace Achievement Award
US Army Award
US Department of Energy - General Award
US Department of Health and Human Services
US Environmental Protection Agency - Georgia Section
US Fish and Wildlife Service Recognition
US Metric Association
US Navy/Marine Corps
Yale Science & Engineering Association Inc.

Entrants in the GSEF compete for more than \$50,000 in awards and prizes honoring best achievements in specific scientific areas.

Tours

There will be organized tours of various campus buildings, departments and local companies on Friday, April 3, from 9:00 a.m. to 4:00 p.m. Visitors are welcome in buildings at other times, but these special tours will offer opportunities to visit areas not always open to the general public.

The tours may include:

Aerospace Studies	Geography Department
Ag & Applied Economics Tour	Geology Department
Army ROTC	Georgia Museum of Art
Animal & Dairy Science Department	Georgia Museum of Natural History
Artificial Intelligence Center	Gerontology Center
Avian Medicine	Institute of Ecology
Astronomy Department	Livestock & Poultry Department
Biochemistry & Molecular Biology Dept	Mathematics Department
Biological & Agricultural Engineering	Medical College of Georgia School of Nursing
Botany Department - Green Houses & Herbarium	Microbiology Department - "Bacteria Zoo"
Center for Ultrastructural Research	Molecular Graphics Lab
Chemistry Department	Pharmaceutical & Biomedical Sciences
Climatology Research Laboratory	Physics & Astronomy Department
Cognitive Primatology	Plant Pathology
College of Family & Consumer Sciences	Poultry Science
College of Veterinary Medicine	Psychology Department
Complex Carbohydrate Research Center	Ramsey Student Activities Center
Computer Science Department	Rhizotron - Crop and Soil Sciences Department
Entomology - "Insect Zoo"	Textiles, Merchandising and Interiors Dept.
Exercise Science & Aging	The State Botanical Gardens
Food Science & Technology	University Health Center
Foods & Nutrition Assessment Lab	Vision Lab
Genetics and Demography Lab	Warnell School of Forest Resources

GSEF Housing Information

Teachers, sponsors, parents, and groups of students with their chaperons **MUST MAKE THEIR OWN RESERVATIONS** at hotels in the Athens area. Reservations at commercial establishments will not be handled through any Fair personnel. The following is a list of area establishments. You should make your reservations as soon as you know you will be attending the GSEF as hotels will fill up very quickly. When making reservations mention the Georgia Science and Engineering Fair for any available reduced rates.

Local Accommodations

Comfort Inn	(706) 227-9700	Hilton Garden Inn	(706) 353-6800
Comfort Suites	(706) 995-4000	Holiday Inn	(706) 549-4433
Courtyard by Marriott	(706) 369-7000	Holiday Inn Express	(706) 546-8122
Foundry Park Inn	(706) 549-7020	Howard Johnson	(706) 548-1111
Georgia Center	(706) 542-1181	Suburban Lodge	(706) 208-8812
Georgia Gameday Center	(706) 583-4500	Super 8 Motel	(706) 549-0251
Hampton Inn	(706) 548-9600		

Project Research Tips

Goals of Science Research

Research is the process by which people create new knowledge about themselves or the world in which they live in order to answer a question or solve a problem.

Consider this:

Questioning is probably the most important part of scientific creativity and is often followed by an "if...then" statement. Questioning usually leads to experiments or observations.

Good scientists, both young and old, use a process to study what they see in the world. The six stages listed below will help you produce a good scientific experiment:

- 1) Be curious, choose a limited subject, ask a question; identify or originate/define a problem.
- 2) Review published materials related to your problem or question.
- 3) Evaluate the results of your experiment and reach conclusions based on your data.
- 4) Challenge and test your hypothesis through experimentation (data collection) and analysis.
- 5) Evaluate the results of your experiment and reach conclusions.
- 6) Prepare your report and exhibit.

SCIENCE = RESEARCH

Reduce to feasible test

Refute Hypothesis, if possible

Replicate to verify repeatability

Students should learn to be skeptical of all research results, especially their own. A good experiment may or may not answer the questions asked, but almost always leads to fresh questions requiring new experiments or observations. The experimental hypothesis is often developed after one has run a number of preliminary experiments, analyzed a body of results, and reached a tentative conclusion for your experiment.

Goals of Engineering

Scientists try to understand how nature works, engineers create things that never were. An engineering project should state the engineering

goals, the developmental process and the evaluation of improvements. Engineering projects may include the following steps:

- 1) Define a need
- 2) Develop design criteria
- 3) Search literature to see what has already been done
- 4) Prepare preliminary designs
- 5) Build and test a prototype
- 6) Retest and redesign as necessary

ENGINEERING = DO

Determine needs and define problems

Develop alternatives and select best

Deploy solutions and evaluate

Pre-Approval for your project?

1. SRC (Scientific Review Committee) if your project involves humans, animals, pathogens, controlled substances, recombinant DNA, or tissue.

The SRC is made up of at least 3 members:

- a science teacher
- a doctor or scientist
- an animal care specialist

2. IRB (Institutional Review Board) if your project involves **human subjects**.

The IRB can be the same committee as the SRC but must also have:

- a school administrator
- a psychologist, psychiatrist, medical doctor, or nurse

Eligibility

Projects will be eligible for exhibition at the Georgia Science and Engineering Fair only if they have won recognition and were selected by a GSEF affiliated fair. However, winners from regional fairs are not automatically accepted due to quota limitations. Grades 9-12 will be in the Senior Division and grades 6-8 will be in the Junior Division with only first or second place winners eligible to be invited. Each ISEF affiliated fair may send up to two finalists and one team project to the International Science and Engineering Fair. Only grades 9-12 are eligible for the International Science and Engineering Fair.

The Science Fair Timeline

This list will help you organize your time for your local fair. Detailed information is on our website.

12 weeks before the fair – or sooner!

Pick Your Topic - Ideas come from hobbies, interests, or problems needing solutions. Limit your topic to concentrate your time and resources. Many ideas are available through books and web sites.

Study Your Topic - Go to the library, talk to professionals in the field, write to companies for information, obtain or construct needed equipment, arrange where you will work (research lab, school, other) and who will supervise your work, if necessary.

Organize and Theorize - Organize everything you have learned about your topic. Narrow down your hypothesis by focusing on a particular idea.

Write out a Research Plan - This plan includes Problem, Hypothesis, Procedures, and Bibliography. It should explain how you will do your experiment before you begin and exactly what it will involve.

Obtain Your Forms - Complete necessary forms *before* experimentation. Obtain all signatures.

ALL STUDENTS need:

- Checklist for Adult Sponsor (1)**
- Research Plan (1A) + written research plan**
- Approval Form (1B)**
- Abstract Form**

Consult with your Adult Sponsor. Get all needed signatures and additional forms you may need.

9 weeks before the fair – or sooner!

Begin Experimentation - Keep detailed notes of every experiment, measurement, and observation **in ink in a bound log book**. Remember your control and experimental groups must have at least 5 test subjects in each.

4 weeks before the fair

Examine Your Results - Examine and organize your findings. Statistically analyze your data and organize your results into charts and graphs.

Draw Conclusions - Did your experimentation support your hypothesis? Discuss this, any problems you had, and future plans.

3 weeks before the fair

Write Your Abstract - Your abstract is a summary of your research using 250 words or less, on *Official Abstract Form*.

Prepare Your Report - Your written report is a *complete* discussion of your research including your problem, hypothesis, materials, procedures, results, graphs, charts, conclusions, acknowledgments, and bibliography.

Prepare Your Display - Attractive, simple, and informative. Follow the Official GSEF/ISEF Rulebook for size and display safety limitations.

School Prescription for Successful Science Research Projects

1. **The School or sponsoring institution is REQUIRED to form a Scientific Review Committee (SRC) made up of a Biomedical Scientist (PhD, MD, DDS, or DO), a Science Teacher, and an Animal Care Specialist.**
 - to PRE-approve experimental procedures of projects involving human subjects, nonhuman vertebrates, pathogens, controlled substances, recombinant DNA, and human/animal tissue.
 - to POST-review procedures and safety rules for above projects.
 - to review all remaining projects to make sure students followed applicable rules.
2. **The School or sponsoring institution must provide an Institutional Review Board (IRB) made up of a science teacher, a school administrator, and one of the following: a psychologist, psychiatrist, medical doctor, physician's assistant, or registered nurse.** *This committee may be combined with the SRC to form one Review Committee for all projects just by adding one person from the list of human subjects reviewer above.*
 - to evaluate the potential physical or psychological risk of research involving human subjects.
3. **The School should encourage positive commitment by teachers involved.**
 - Decision should be made if science research projects will be mandatory.
 - Teachers must provide guidance and certify the science research for further competition. Thus, when the teacher signs the form they are giving approval to the quality, safety and appropriateness of the research. Students should be encouraged to exhibit only their very best effort.
4. **Sponsors or Teachers should provide clear communication (in writing) to students about:**
 - What a science research project is
 - What is expected of them
 - What the time lines are
 - Where they may go for help
 - How much help they can get
4. **Sponsors or Teachers should provide continuous encouragement and follow-up:**
 - Schedule 10-15 minutes at least twice a week for discussions of students' progress, ideas, etc.
5. **Sponsors or Teachers should use available resources:**
 - Teacher, librarian, a science contact person, parents, and professionals in the community.
6. **Science department or school staff should identify a science fair committee:**
 - to provide information to students and teachers
 - to plan logistics for setting up the fair exhibits
 - to arrange for judges and awards
 - to plan logistics for judging research projects
 - Involve parents and the community (i.e. open house, PTA, school newspapers, parents' newsletter, etc.)

What Do the Judges Look For?

Judges evaluate and focus on:

- 1) what the student did in the current year;
- 2) how well a student followed the scientific methodologies;
- 3) the detail and accuracy of research as documented in the data book;
- 4) whether experimental procedures were used in the best possible way.

Overall, judges look for well thought-out research. They look for the significance of your project in its field, as well as how thorough you were. Did you leave something out? Did you start with four experiments and finish only three because of lack of commitment?

The judges applaud those students who can speak freely and confidently about their research. They are not interested in memorized speeches -- they simply want to TALK with you about your research to see if you have a good grasp of your project from start to finish. Besides asking the obvious questions, judges often ask questions outside the normal scope to test your insight into your research such as "What didn't you do?" and "What would be your next step?"

What does the Scientific Review Committee (SRC) look for?

- 1) Evidence of library search
- 2) Type and amount of supervision
- 3) Use of and demonstrated skill in accepted research techniques
- 4) Completed forms and signatures
- 5) Humane treatment of animals
- 6) Compliance with rules and laws governing human and animal research
- 7) Appropriate use of recombinant DNA, pathogenic organisms, and controlled substances

2009 GEORGIA SCIENCE & ENGINEERING FAIR SCORE SHEET

Title:

Space Number:

Category:

Name:

Teacher:

School:

JUDGING AREAS & Comments/suggestions/constructive criticism

CREATIVE ABILITY: originality, new methods, construction/design, materials used, new conclusions
Comments:

SCIENTIFIC THOUGHT: clear purpose & objective, searched for related facts, development of hypothesis, controlled & accurate observations, sufficient data, test for accuracy of data, conclusions limited to data **or ENGINEERING GOALS:** is objective clear, useful; solution workable, acceptable and economic, improvement over existing methods, was solution tested
Comments:

THOROUGHNESS: purpose carried out, problem completely covered, conclusions based on single replication experiment, complete notes-log book, student(s) aware of other approaches/theories, familiar with related literature
Comments:

SKILLS: does student(s) have skills to do work, where was the project done, was assistance received, from whom, reasonable amount?
Comments:

CLARITY/KNOWLEDGE: was student(s) able to discuss project, does written material reflect understanding, presented in orderly manner, clear data/results, exhibit self explanatory, was all work done by student(s)?
Comments:

Note: Scores are never given out to exhibitors, teachers or parents. Team Projects are also judged on how well the group of students worked together and the complete knowledge of the projects by all members on the team.

Abstract Tips

Each student who completes a science fair project must write an abstract to be displayed with the project. An abstract gives the essence of the project in a brief but complete form — it should not exceed 250 words. Judges and the public should have a fairly accurate idea of the project after reading the abstract.

The abstract must focus on the current year's research and give only minimal reference to previous work. Details and discussions should not be included in the abstract, but may be put in the longer, written research paper (if required), or given on the project exhibit board.

Finalists at the Intel ISEF are required to use the on-line system for submitting their abstract. Regional and local fairs use the Official Abstract Form (not necessary for most local fairs). It is also required that the abstract not include acknowledgments (such as referencing a mentor or university laboratory).

Sample Abstract:

Effects of Marine Engine Exhaust Water on Algae

Mary E. Jones
Hometown High School, Hometown, PA

This project in its present form is the result of bioassay experimentation on the effects of two-cycle marine engine exhaust water on certain green algae. The initial idea was to determine the toxicity of outboard engine lubricant. Some success with lubricants eventually led to the formulation of "synthetic" exhaust water which, in turn, led to the use of actual two-cycle engine exhaust water as the test substance.

Toxicity was determined by means of the standard bottle or "batch" bioassay technique. *Scenedesmus quadricauda* and *Ankistrodesmus* sp. were used as the test organisms. Toxicity was measured in terms of a decrease in the maximum standing crop. The effective concentration - 50% (EC 50) for *Scenedesmus quadricauda* was found to be 3.75% exhaust water; for *Ankistrodesmus* sp. 3.1% exhaust water using the bottle technique.

Anomalies in growth curves raised the suspicion that evaporation was affecting the results; therefore, a flow-through system was improvised utilizing the characteristics of a device called a Biomonitor. Use of the Biomonitor lessened the influence of evaporation, and the EC 50 was found to be 1.4% exhaust water using *Ankistrodesmus* sp. as the test organism. Mixed populations of various algae gave an EC 50 of 1.28% exhaust water.

The contributions of this project are twofold. First, the toxicity of two-cycle marine engine exhaust was found to be considerably greater than reported in the literature (1.4% vs. 4.2%). Secondly, the benefits of a flow-through bioassay technique utilizing the Biomonitor was demonstrated.

Purpose of the Experiment

- An introductory statement of the reason for investigating the topic of the project.
- A statement of the problem or hypothesis being studied.

Procedures Used

- A summarization of the key points and an overview of how the investigation was conducted.
- An abstract does not give details about the materials used unless it greatly influenced the procedure or had to be developed to do the investigation.
- An abstract should only include procedures done by the student. Work done by a mentor (such as surgical procedures) or work done prior to student involvement must not be included.

Observation/Data/Results

- This section should provide key results that lead directly to the conclusions you have drawn.
- It should not give too many details about the results nor include tables or graphs.

Conclusions

- Conclusions from the investigation should be described briefly.
- The summary paragraph should reflect on the process and possibly state some applications and extensions of the investigation.

An abstract does not include a bibliography unless specifically required by your local fair. The Intel ISEF requires the bibliography as part of the research plan to be provided on Form 1A.

Forms Tips and Dates

The Intel ISEF forms constitute written documentation of what will occur in a research project. They are designed to provide the information that is needed to review the project to ensure compliance with the Intel ISEF rules and with laws and regulations that apply to the project. The forms should be filled out and signed before any research takes place. (Only Forms 1C, 7, and the abstract are done after the research.) The dates of the signatures reflect when the approval or consent is given.

Checklist for Adult Sponsor (1)

The checklist is provided so that the adult sponsor can review what information (and therefore which forms) must be provided. The date signed is the date that the sponsor first reviews the project plan.

Student Checklist (1A)

On this page, the student outlines what the project is about. Items that especially need to be clear are the following:

#5 Any project conducted in a similar area of research as previous projects should be considered a continuation. If the project is a continuation, explain on Form 7 as completely as possible how the project will differ from previous experimentation because **ONLY** a new and different research project is allowed. (If based on previous research, the current year project must demonstrate significant progress.)

#6 Explain when the actual experimental procedure (not the background literature review) will begin and end because **ONLY** a 12-month project that occurred within the last 18 months before this Intel ISEF is allowed.

#7 Explain where the experimental research will be done: home, university, field. Pathogens may **NOT** be cultured at home. Research animals must be housed in school or institutional settings only. Universities, research facilities, and industrial settings will require the additional documentation of Form 1C to explain what was done at each facility.

#9 Attach a research plan (next form).

Student Checklist (1A)

Explain clearly and in detail what will be done in the research project.

Approval Form (1B)

These statements attest that each of these people (or committees) approves or consents to this project. The dates should be signed as described below:

a) Student - Date they attest that they understand the possible risks and that they will read and follow the rules.

b) Parent/Guardian - Date they consent to their child doing this project.

c) Adult Sponsor - Date indicates when they approved this project.

d) SRC Approval BEFORE - Date that the committee reviews this project **BEFORE** the experimentation. Projects that must be pre-approved are research in these areas: human subjects, nonhuman vertebrate animals, pathogenic agents, controlled substances, recombinant DNA, and human or animal tissue.

e) SRC Approval AFTER - This applies only to projects that needed preapproval by the SRC but were done at a research institution and were pre-approved by that institution instead of the SRC. Date signed indicates when the affiliated SRC approved this project after it was completed. Attach all documentation from the research institution showing approval of the project.

f) Final SRC Approval - All projects must be reviewed by the SRC after the experimentation is complete and shortly BEFORE they compete in the affiliated fair. The date signed shows the date that SRC gives final approval to this project.

Regulated Research Institution (1C)

This form explains what the student researcher actually did and is signed after the project is completed. This form is only needed if the research was done at a research institution (university lab, for example) or in an industrial setting.

Qualified Scientist (2)

On this page, the scientist explains what will be done to oversee this project. The date signed indicates the date that they approve this project (before experimentation takes place).

Risk Assessment Form (3)

Required for projects using hazardous chemicals, activities or devices or regulated substances. Must be completed prior to student experimentation.

Human Subject and Informed Consent (4)

This page is filled out by the student researcher to explain to the IRB how the safety and well being of the test subjects will be ensured. The IRB reviews the project, checks the risk level and each member signs with the date they approve this project. This review and the date signed must be BEFORE any experimentation takes place.

Copies of this form are used (for informed consent) to explain very completely to the research subject and their parent(guardian) exactly what will happen to the subject in the project. Questionnaires, sample tests, and so on MUST be given to the IRB and to the parent/guardian. If they approve, they sign with the date that they approve. (Before the experiment begins). If a photo is to be displayed, the participant signs and dates it when they give permission.

Vertebrate Animal Form (5)

This form is filled out by the student researcher and describes the housing and care for the animals. The bottom of the form is filled out by the supervisor or scientist and is signed and dated when they approve this project with these housing conditions. (Before experimentation begins.)

Potentially Hazardous Biological Agents (6A)

This form is filled out by the student researcher and is required for all research involving microorganisms, rDNA and fresh tissue, blood and body fluids. SRC/IACUC/IBC/RAC approval required before experimentation. There is a section to be completed by the designated supervisor and others to be completed by the fair's SRC.

Human & Vertebrate Animal Tissue (6B)

This form is filled out by the student researcher and explains the source of the tissue. The designated supervisor must sign to show approval of the use of this tissue and the date (before experimentation) that they approve.

Continuation Projects Form (7)

Any project conducted by the student or team in a similar area of research as previous projects should be considered a continuation. Explain as completely as possible how the project is different from previous experimentation because ONLY a new and different research project is allowed. (It can be based on previous research, but must be new and different research.) Date signed is the date the student researcher is certifying that this information is correct.

Abstract

ISEF finalists must use the on-line system. Regional and local fairs use the Adobe Acrobat® file listed above. The abstract is a summary written after experimentation that explains the project. The date signed is the date the student researcher certifies that the statements are correct.

Common Scientific Research Committee (SRC) Problems

Top Five Intel ISEF Paperwork Problems

1. Incomplete Research Plan 1A
 1. Must include proposed and actual start and end dates
 2. Must include detailed research plan
 3. Must have all work site information completed
2. Missing final SRC signature on the Approval Form 1B
The SRC must sign the bottom of 1B to demonstrate that the paper went through SRC review prior to competition at the regional and state level.
3. Incorrect or incomplete Abstract
 1. Must be in proper format
 2. Must be without acknowledgments
 3. Must have checks properly marked and be signed
 4. Must reflect current year's work done by student
4. Missing Designated Supervisor Form 3
 1. Must be completed for projects that involve chemicals, equipment, or other potential hazards
 2. Often missing, and often incomplete without description of safety precautions taken
5. Prior year's paperwork for continuations
 1. Continuing projects, even those with clear demonstration of significant progress, must provide prior year's research (1A and Research Plan Attachment)
 2. Consider the project a continuation if prior work has been done in same general research area

Top Five Intel ISEF SRC Problems

(Guaranteed to require an interview)

1. Vertebrate animal projects without proper SRC or IACUC approval or lacking appropriate detail in the research plan
2. Human subject projects without evidence of proper prior approval or informed consents
3. Projects involving the culture of potentially-pathogenic and pathogenic agents without appropriate detail about materials cultured, methods, or location of culturing and storage
4. Continuing projects without enough detail in the research plan to demonstrate significant progress, including an abstract that is often too similar to the previous year's
5. Projects that have eligibility questions regarding either the number of students involved in the project (team to individual or too many team members), the longevity of the research involved, or the age of the participants

Top 10 SRC Problems from Regional SRC Reports

1. Incomplete paperwork - missing forms or signatures
2. Not getting paperwork in on time
3. Missing human subject forms 4a and 4b after conducting a survey or otherwise using humans in the project
4. Not differentiating between a qualified scientist and a designated supervisor
5. Inappropriate handling and safety precautions for the use of bacteria and molds (potentially-pathogenic agents)
6. Incomplete research plans, including insufficient bibliography
7. Failure to obtain prior SRC approval
8. Bad dates - paperwork not signed in the appropriate order prior to the start of experimentation
9. Not having prior paperwork for continuing projects
10. Elementary and junior projects and teachers not following the International Rules

Tips to Encourage Science Fair Participation

If you have talented students who are interested in science, here are some ways to encourage them to participate in a science fair.

In the Classroom

- Introduce science fair at the beginning of each semester and even at the end of the school year to get students interested in working on projects over the summer.
- Determine a plan for working within a school's semester or block scheduling of science classes so that everyone can be encouraged to participate.
- Stress hands-on labs with data collection in your science classes. This reinforces concepts and helps students learn the scientific method in a concrete fashion.
- Urge research experiments, rather than models or collections. To continue on to an Intel® ISEF affiliated fair, only research experiments are allowed.
- Require students to write up their lab experiments using the scientific method. Make sure they have all the parts of an experimental summary: question, hypothesis, materials, procedures, results in chart or graph form, analysis, and conclusion.

Outside of the Classroom

- Encourage students to pursue their individual interests within the scientific topic being learned and to go beyond their classroom learning.
- Start a science club to help students that are not currently enrolled in a science class and to provide extra-curricular opportunities in science exploration and discovery.
- Be familiar with the Intel ISEF & GSEF Rules and Regulations so that you may advise your students. Hold a seminar to explain them.
- Work with the community to connect students to mentors - at the local university, hospital, or veterinary practice.

Enter the 61ST Georgia Science & Engineering Fair

Design a Pin and T-Shirt Contest

Win a \$250 Savings Bond along with a free T-shirt and *your* official GSEF pin! T-shirts use the same design and are sold at GSEF by the Georgia Junior Academy of Sciences as a fund raiser.

This year's theme is "Science: Then and Now"

1. Following the theme for this year, draw your design and transfer it neatly to the space provided above.
2. Put your name, address, school, school address, and school phone number on the back of this page.
3. Send entry to Office of Academic Special Programs, University of Georgia Center for Continuing Ed., Athens, GA 30602

** Entries must be received by JANUARY 1, 2009!*

Design suggestions:

- Tiny details do not work well when reduced to the size of a pin (1 inch).
- Use strong outlines around colors and shapes.
- Remember the theme when coming up with your design.
- Use the state outline only when drawing your pin.
- Your pin and T-shirt will represent our state at the International Fair. Think Georgia, Science, and great design!

GSEF SPONSORS

The Georgia Science and Engineering Fair is made possible by the support of many individuals, industries and organizations.

**Athens Coca - Cola
Domino's Pizza**

Silver Membership

**Georgia Tech
Scientific Atlanta
Merial Inc.**

Gold Membership

**Jackson EMC
Georgia Power
The University of Georgia**

Acknowledgments

Fair directors, teachers, scientists, parents, and adult volunteers inspire and encourage students to explore and investigate their world through hands-on research. Those of you who work with these young people are rarely recognized and never can be adequately thanked. Without you, precollege science and engineering projects and science and engineering fairs would not be possible. We applaud your commitment and appreciate your hard work. We sincerely hope that our efforts to enhance these Rules will serve you in working with students.

PERMISSION TO REPRINT WITH CREDIT GRANTED
Available on our website at www.societyforscience.org/isef/

❖ Changes & Modifications for 2008-May 2009 ❖

Human Subjects

- Ingestion, tasting, smelling, application of a substance or exposure to any potentially hazardous materials is an example of an activity containing more than minimal risk for studies involving human subjects. See page 14.

Vertebrate Animals

- Certain studies involving behavioral observations of animals are exempt from prior SRC review. See page 17, #11.
- Research conducted at a regulated research institution involving nutritional deficiency, ingestion, inoculation or exposure to unknown or potentially hazardous materials or drugs is permitted to proceed only to the point where the first sign of the deficiency or effect appear. See page 19, #4.

Potentially Hazardous Biological Agents

- Frozen tissue is to be treated the same as fresh tissue.
- Form 3 is no longer required for studies involving certain microorganisms. See page 21, #12.

Hazardous Chemicals, Activities or Devices

- Clarification of rules regarding firearms and explosives. See page 26, #1.

Form and Other Changes

- The name of Form 6A has been expanded to include the term “Risk Assessment.”
- “Science educator” replaces “science teacher” for membership on IRB’s and SRC’s.

In addition to providing the rules of competition, these rules and guidelines for conducting research were developed to facilitate the following:

- protect the rights and welfare of the student researcher and human subjects
- protect the health and well-being of vertebrate animal subjects
- follow federal regulations governing research
- offer guidance to affiliated fairs
- use safe laboratory practices
- address environmental concerns

❖ The Rules on the Web ❖

www.societyforscience.org/isef/primer/rules.asp

The International Rules and Guidelines for Science Fairs is available on the Society for Science & the Public website in a number of formats to better aid all of those involved in the process: students, parents, teachers, mentors, fair directors and local, regional and state scientific review committees (SRC) and institutional review boards (IRB).

- [International Rules and Guidelines](#) - The full text of the International Rules and the forms both in html and in a downloadable format.
- The [Intel ISEF Rules Wizard](#) - This “wizard” asks a series of questions about your planned project and will provide a list of forms that you need to complete.
- [Common SRC Problems](#) - This list was generated from the SRC reviews leading up to the Intel ISEF. Read these to get pointers on what NOT to do.

❖ Intel ISEF Categories and Subcategories ❖

The categories have been established with the goal of better aligning judges and student projects for the judging at the Intel ISEF. Local, regional, state and country fairs may or may not choose to use these categories, dependent on the needs of their area. Please check with your affiliated fair(s) for the appropriate category listings at that level of competition.

Please visit our website at www.societyforscience.org/isef/students/research_categories.asp for a full description and definition of the Intel ISEF categories:

❖ Intel ISEF Display and Safety Regulations ❖

Please address any questions regarding Intel ISEF Display and Safety Regulations to:
John O. Cole, Display and Safety Committee Chair, E-mail: dejavu60@msn.com

General Requirements

The Intel ISEF Display and Safety Committee is the final authority on display and safety issues for projects approved by the SRC to compete in the Intel ISEF. Occasionally, the Intel ISEF Display and Safety Committee may require students to make revisions in their display to conform to display and safety regulations.

Maximum Size of Project

Depth (front to back): 30 inches or 76 centimeters

Width (side to side): 48 inches or 122 centimeters

Height (floor to top): 108 inches or 274 centimeters

At the Intel ISEF, fair-provided tables will not exceed a height of 36 inches (91 centimeters).

Maximum project sizes include all project materials and supports. If a table is used, it becomes part of the project and must not itself exceed the allowed dimensions nor may the table plus any part of the project exceed the allowed dimensions.

At the Intel ISEF, any project with a component that will be demonstrated by the Finalist must be demonstrated only within the confines of the Finalist's booth. When not being demonstrated, the component plus the project must not exceed allowed dimensions.

Position of Project

Table or freestanding display must be parallel to, and positioned at, the back curtain of the booth.

Required to be Visible and Vertically Displayed at the Intel ISEF

- Original of official Abstract and Certification as approved and stamped/embossed by the Intel ISEF Scientific Review Committee
- Completed Intel ISEF Project Set-up Approval Form SRC/DS2 (Received on-site at the Fair)
- Regulated Research Institutional/Industrial Setting Form (1C) — if applicable
- Continuation Projects Form (7) — if applicable
- Photograph / image credits

Required to be at the Project But Not Displayed at the Intel ISEF

Forms including, but not limited to, **Checklist for Adult Sponsor (1)**, **Student Checklist (1A)**, **Research Plan and Approval Form (1B)** which are required for the project or for Scientific Review Committee approval do not have to be displayed as part of the project but must be available in the booth in case asked for by a judge or other Intel ISEF official.

Human Subjects Form (4) (or equivalent form provided by a regulated research institution) for human subjects of the research, surveys, photographs, etc. (if applicable) are confidential information, must **not** be displayed, but **must be available in the booth** in case requested by a judge or other Intel ISEF official. Human Subjects Form (4) or an equivalent photograph release signed by the human subject is required for visual images of humans (other than the Finalist) displayed as part of the project.

Handouts/Official Abstract and Certification at the Intel ISEF

The Intel ISEF Scientific Review Committee defines the "official abstract and certification" as an **UNALTERED** original abstract and certification as stamped/embossed by the Intel ISEF Scientific Review Committee. If the Scientific Review Committee requires a Finalist to make changes to the abstract and certification submitted with registration papers, the revised version will be stamped/embossed, will replace the earlier version, and will become the Finalist's official abstract and certification.

The only abstract allowed anywhere at a project is the official abstract. The term "abstract" may not be used as a title or reference for any information on a Finalist's display or in a Finalist's materials at the project except as part of displaying the official abstract.

An original stamped/embossed official abstract and certification must appear on the display board or in a vertical position at the project. Handouts to judges and to the public must be limited to **UNALTERED photocopies** of the official abstract and certification.

Not Allowed at Project or in Booth

1. Living organisms, including plants
2. Taxidermy specimens or parts
3. Preserved vertebrate or invertebrate animals
4. Human or animal food
5. Human/animal parts or body fluids (for example, blood, urine)
6. Plant materials (living, dead, or preserved) that are in their raw, unprocessed, or non-manufactured state (Exception: manufactured construction materials used in building the project or display)
7. All chemicals including water (Exceptions: water integral to an enclosed apparatus or water supplied by the Display and Safety Committee)
8. All hazardous substances or devices [for example, poisons, drugs, firearms, weapons, ammunition, reloading devices, and lasers (as indicated in item 5 in the section of these rules entitled “Allowed at Project or in Booth BUT with the Restrictions Indicated”)]
9. Dry ice or other sublimating solids
10. Sharp items (for example, syringes, needles, pipettes, knives)
11. Flames or highly flammable materials
12. Batteries with open-top cells
13. **Awards, medals, business cards, flags, logos, endorsements, and/or acknowledgments** (graphic or written) unless the item(s) are an integral part of the project (Exception: Intel ISEF medal(s) may be worn at all times.)
14. Photographs or other visual presentations depicting vertebrate animals in surgical techniques, dissections, necropsies, or other lab procedures
15. Active Internet or e-mail connections as part of displaying or operating the project at the Intel ISEF
16. Prior years’ written material or visual depictions on the vertical display board. [Exception: the project title displayed in the Finalist’s booth may mention years or which year the project is (for example, “Year Two of an Ongoing Study”)]. Continuation projects must have the Continuation Project Form (7) vertically displayed.
17. Glass or glass objects unless deemed by the Display and Safety Committee to be an integral and necessary part of the project (Exception: glass that is an integral part of a commercial product such as a computer screen)

18. Any apparatus deemed unsafe by the Scientific Review Committee, the Display and Safety Committee, or Society for Science & the Public (for example, large vacuum tubes or dangerous ray-generating devices, empty tanks that previously contained combustible liquids or gases, pressurized tanks, etc.)

Allowed at Project or in Booth BUT with the Restrictions Indicated

1. Soil, sand, rock, and/or waste samples **if permanently encased in a slab of acrylic**
2. Postal addresses, World Wide Web and e-mail addresses, telephone and fax numbers **of Finalist only**
3. Photographs and/or visual depictions **if:**
 - a. They are not deemed offensive or inappropriate by the Scientific Review Committee, the Display and Safety Committee, or Society for Science & the Public. This includes, but is not limited to, visually offensive photographs or visual depictions of invertebrate or vertebrate animals, including humans. The decision by any one of the groups mentioned above is final.
 - b. They have credit lines of origin (“Photograph taken by...” or “Image taken from...”). (If all photographs being displayed were taken by the Finalist or are from the same source, one credit line prominently and vertically displayed is sufficient.)
 - c. They are from the Internet, magazines, newspapers, journals, etc., and credit lines are attached. (If all photographs/images are from the same source, one credit line prominently and vertically displayed is sufficient.)
 - d. They are photographs or visual depictions of the Finalist.
 - e. They are photographs of human subjects for which signed consent forms are at the project or in the booth. (Human Subjects Form 4 or equivalent photograph release signed by the human subject must be included in the paperwork and must be properly checked on the Intel ISEF Official Abstract and Certification.)
4. Any apparatus with unshielded belts, pulleys, chains, or moving parts with tension or pinch points **if for display only and not operated**
5. Class II lasers **if:**
 - a. The output energy is <1 mW and is operated only by the Finalist
 - b. Operated only during the Display and Safety inspection and during judging
 - c. Labeled with a sign reading “**Laser Radiation: Do Not Look into Beam**”
 - d. Enclosed in protective housing that prevents physical and visual access to beam
 - e. Disconnected when not operating

Note: Class II lasers are found in laser pointers and in aiming and range-finding devices. They pose a risk if the beam is directly viewed over a long period of time.

6. Class III and IV lasers if for display only and not operated (*See the description of Class III and Class IV lasers in the Radiation section of the Hazardous Chemicals, Activities, or Devices chapter of the International Rules for Pre-college Research.*)
7. Any apparatus producing temperatures that will cause physical burns if adequately insulated
8. The only items that may be displayed on the front of the provided tables are the forms listed in the section of these rules entitled "Required to be Visible and Vertically Displayed at the Intel ISEF"

Electrical Regulations at the Intel ISEF

1. Finalists requiring 120 or 220 Volt A.C. electrical circuits must provide a **UL-listed 3-wire extension cord** which is appropriate for the load and equipment.
2. Electrical power supplied to projects and, therefore, the maximums allowed for projects is **120 or 220 Volt, A.C., single phase, 60 cycle**. Maximum circuit amperage/wattage available is determined by the electrical circuit capacities of the exhibit hall and may be adjusted on-site by the Display and Safety Committee. For all electrical regulations, "**120 Volt A.C.**" or "**220 Volt A.C.**" is intended to encompass the corresponding range of voltage as supplied by the facility in which the Intel ISEF is being held.
3. All electrical work must conform to the National Electrical Code or exhibit hall regulations. The guidelines presented here are general ones, and other rules may apply to specific configurations. The on-site electrician may review electrical work on any project.
4. All electrical connectors, wiring, switches, extension cords, fuses, etc. must be **UL-listed** and must be appropriate for the load and equipment. Connections must be soldered or made with **UL-listed** connectors. Wiring, switches, and metal parts must have adequate insulation and over-current safety devices (such as fuses) and must be inaccessible to anyone other than the Finalist. Exposed electrical equipment or metal that possibly may be energized must be shielded with a non-conducting material or with a grounded metal box to prevent accidental contact.
5. Wiring not part of a commercially available **UL-listed** appliance or piece of equipment must have a clearly visible fuse or circuit breaker on the supply side of the power source and prior to any project equipment.
6. There must be an accessible, clearly visible on/off switch or other means of disconnect from the **120 or 220 Volt** power source.
7. Any lighting that generates considerable and excessive amounts of heat (high-intensity lamps, halogen lights, etc.) must be turned off when the Finalist is not present.

Other Intel ISEF Information and Requirements

1. *Finalists must be present at their projects for the Display and Safety inspection. The inspection is a process that takes place between the Finalist and inspector; therefore, no other persons should be present representing the Finalist except for an interpreter if necessary.*
2. No changes, modifications, or additions to projects may be made after approval by the Display and Safety Committee and the Scientific Review Committee.
3. Society for Science & the Public, the Scientific Review Committee, and/or the Display and Safety Committee reserve the right to remove any project for safety reasons or to protect the integrity of the Intel ISEF and its rules and regulations.
4. A project data book and research paper are not required but are highly recommended.
5. The only acceptable informed consent form for use at the Intel ISEF is the official Human Subjects Form (4) in the International Rules for Precollege Science Research or an equivalent form provided by a regulated research institution (see Form 1C) or, in the case of display of photographs only, an equivalent photograph release signed by the human subject.
6. Finalists using audio-visual or multi-media presentations (for example, 35mm slides; videotapes; images, graphics, animations, etc., displayed on computer monitors; or other non-print presentation methods) must be prepared to show the entire presentation to the Display and Safety inspectors before the project is approved.
7. If a project fails to qualify and is not removed by the Finalist, Society for Science & the Public will remove the project in the safest manner possible but is not responsible for damage to the project.
8. Any disks, CDs, printed materials, etc. (including unofficial abstracts) designed to be distributed to judges or the public will be confiscated by the Display and Safety Committee and will be discarded immediately.
9. Project sounds, lights, odors, or any other display items must not be distracting.
10. No food or drinks, except small containers of bottled water for personal consumption, are allowed in the Exhibit Hall.

❖ ALL PROJECTS ❖

❖ Ethics Statement

Scientific fraud and misconduct are not condoned at any level of research or competition. Such practices include plagiarism, forgery, use or presentation of other researcher's work as one's own and fabrication of data. Fraudulent projects will fail to qualify for competition in affiliated fairs or the Intel ISEF.

❖ Eligibility/Limitations

- 1) Any student in grades 9-12 or equivalent is eligible, none of whom has reached age 21 on or before May 1 preceding the Intel ISEF.
- 2) Each student may enter only **one** project which covers research done over a maximum of 12 continuous months between January 2008 and May 2009.
- 3) Students may compete in only one ISEF Affiliated Fair, except when proceeding to a state/national fair affiliated with the Intel ISEF from an affiliated regional fair.
- 4) Team projects may have a maximum of three members.
- 5) Each ISEF-affiliated fair may send up to two Individual Project Finalists and one Team Project of two or three Finalists to the Intel ISEF.
- 6) Projects that are demonstrations, 'library' research or informational projects, 'explanation' models or kit building are not appropriate for the Intel ISEF.
- 7) A research project may be a part of a larger study done by professional scientists, but the project presented by the student may only be their portion of the complete study.

❖ Requirements

General

- 1) All domestic and international students competing in an ISEF-affiliated fair must adhere to all of the rules as set forth in this document.
- 2) All projects must adhere to the Ethics Statement above.
- 3) Projects must adhere to local, state, country and U.S. Federal laws, regulations and permitting conditions.
- 4) Introduction or disposal of non-native species, pathogens, toxic chemicals or foreign substances into the environment is prohibited. See www.anstaskforce.gov/documents/isef.pdf.
- 5) Intel ISEF exhibits must adhere to Intel ISEF display and safety requirements.
- 6) **It is the responsibility of the student and adult sponsor to check with their affiliated fair for any additional restrictions or requirements.**

Approval and Documentation

- 7) Before experimentation begins, an Institutional Review Board (IRB) or Scientific Review Committee (SRC) must review and approve most projects involving human subjects, vertebrate animals, and potentially hazardous biological agents. See the appropriate sections of the Rules Book.
- 8) Every student must complete **Student Checklist (1A), a Research Plan and Approval Form (1B)** and review the project with the Adult Sponsor as the **Checklist for Adult Sponsor (1)** is completed.
- 9) A Qualified Scientist is required for all studies involving BSL-2 potentially hazardous biological agents, DEA-controlled substances, more than minimal risk in human subjects and for many vertebrate animal studies.
- 10) After initial IRB/SRC approval (if required), any proposed changes in the **Student Checklist (1A)** and **Research Plan** must be re-approved before laboratory experimentation/data collection resumes.
- 11) Projects which are continuations of previous year's work and which require IRB/SRC approval must be reapproved prior to experimentation/data collection for the current year.
- 12) Any continuing project must document that the additional research is new and different. (See **Continuation Projects Form (7)**)
- 13) If work was conducted in a regulated research institution, industrial setting or any work site other than home, school or field at any time during the current ISEF project year, **Regulated Research Institutional/Industrial Setting Form (1C)** must be completed.
- 14) After experimentation, each student or team must submit a (maximum) 250-word, one-page abstract which summarizes the current year's work. The abstract must describe research conducted by the student, not by adult supervisors.
- 15) A project data book and research paper are not required, but are recommended. (See *Student Handbook*; Regional fairs may have different requirements).
- 16) All signed forms, certifications, and permits must be available for review by an SRC just before each fair a student enters.

❖ Continuation of Projects

- 1) As in the professional world, research projects may be done that build on work done in previous years. Students will be judged only on the most recent year's research. The project year includes research conducted over a maximum of 12 continuous months from January 2008- May 2009.
- 2) Any project based on the student's prior research could be considered a continuation project. If the current year's project could not have been done without what was learned from the past year's research, then it is a continuation project for competition. These projects must document that the additional research is an expansion from prior work (e.g. testing a new variable or new line of investigation, etc.) Repetition of previous experimentation with the exact same methodology and research question or increasing sample size are examples of unacceptable continuations.
- 3) Display boards must reflect the current year's work only. The project title displayed in the Finalist's booth may mention years (for example, "Year Two of an Ongoing Study"). Supporting data books (not research papers) from previous related research may be exhibited on the table properly labeled as such.
- 4) Longitudinal studies are permitted as an acceptable continuation under the following conditions:
 - a. The study is a multi-year study testing or documenting the same variables in which time is a critical variable. (Examples: Effect of high rain or drought on soil in a given basin, return of flora and fauna in a burned period over time.)
 - b. Each consecutive year must demonstrate time-based change.
 - c. The display board must be based on collective past conclusionary data and its comparison to the current year data set. No raw data from previous years may be displayed.

NOTE: For competition in the Intel ISEF, documentation must include the **Continuation Project Form (7)**, the prior year's abstract and **Student Checklist (1A)** and **Research Plan** or equivalent documentation. Each page of the previous year's forms must be clearly labeled in the upper right hand corner with the year (ex: 2007-2008). Retain all previous years' paperwork in case an SRC requests documentation of experimentation conducted in other prior years.

❖ Team Projects

- 1) Team Projects compete in a separate "team" category against all other Team Projects. An ISEF Affiliated Fair has the option of sending a team project, in addition to two individual projects, to the Intel ISEF. ISEF-Affiliated Fairs are not required to have Team Projects, but are encouraged to do so.
- 2) Teams may have up to three members. **NOTE:** Teams may not have more than three members at a local fair and then eliminate members to qualify for the Intel ISEF.
- 3) Team membership cannot be changed during a given research year including converting from an individual project or vice versa, but may be altered in subsequent years.
- 4) Each team should appoint a team leader to coordinate the work and act as spokesperson. However, each member of the team should be able to serve as spokesperson, be fully involved with the project, and be familiar with all aspects of the project. The final work should reflect the coordinated efforts of all team members and will be evaluated using similar rules and judging criteria as individual projects.
- 5) Each team member must submit an **Approval Form (1B)**. However, team members must jointly submit the **Checklist for Adult Sponsor (1)**, one abstract, a **Student Checklist (1A)**, a **Research Plan** and other required forms.
- 6) Full names of all team members must appear on the abstract and forms.

❖ Roles and Responsibilities of Students & Adults ❖

1) The Student Researcher(s)

The student researcher is responsible for all aspects of the research project including enlisting the aid of any needed supervisory adults (Adult Sponsor, Qualified Scientist, etc.), obtaining necessary approvals (SRC, IRB, etc.), following the Rules & Guidelines of the ISEF, and doing the experimentation, engineering, data analysis, etc. involved in the project.

The student must be in grades 9-12 or equivalent and must not have reached age 21 on or before May 1 preceding the Intel ISEF. Students may compete as a team of up to 3 members.

Scientific fraud and misconduct are not condoned at any level of research or competition. Such practices include plagiarism, forgery, use or presentation of other researcher's work as one's own and fabrication of data. Fraudulent projects will fail to qualify for competition in affiliated fairs or the Intel ISEF.

2) The Adult Sponsor

An Adult Sponsor may be a teacher, parent, university professor, or scientist in whose lab the student is working. This individual must have a solid background in science and should have close contact with the student during the course of the project.

The Adult Sponsor is responsible for working with the student to evaluate any possible risks involved in order to ensure the health and safety of the student conducting the research and the humans or animals involved in the study. The Adult Sponsor must review the student's **Student Checklist (1A)** and **Research Plan** to make sure that: a) experimentation is done within local, state, and federal laws and these International Rules; b) that forms are completed by other adults involved in approving or supervising any part of the experiment; and c) that criteria for the Qualified Scientist adhere to those set forth below.

The Adult Sponsor must be familiar with the regulations that govern potentially dangerous research as they apply to a specific student project. These may include chemical and equipment usage, experimental techniques, research involving human or vertebrate animals, and cell cultures, microorganisms, or animal tissues. The issues must be discussed with the student when completing the **Research Plan**. Some experiments involve procedures or materials that are regulated by state and federal laws. If not thoroughly familiar with the regulations, the Adult Sponsor should help the student enlist the aid of a Qualified Scientist.

The Adult Sponsor is responsible for ensuring the student's research is eligible for entry in the Intel ISEF.

3) The Qualified Scientist

A Qualified Scientist should possess an earned doctoral/professional degree in the biological or medical sciences as it relates to the student's area of research. However, a master's degree with equivalent experience and/or expertise in the student's area of research is acceptable when approved by a Scientific Review Committee (SRC). The Qualified Scientist must be thoroughly familiar with the local, state, and federal regulations that govern the student's area of research.

The Qualified Scientist and the Adult Sponsor may be the same person, if that person is qualified as outlined above. A student may work with a Qualified Scientist in another city or state. In this case, the student must work locally with a Designated Supervisor (see below) who has been trained in the techniques the student will use.

4) The Designated Supervisor

The Designated Supervisor is an adult who is directly responsible for overseeing student experimentation. The Designated Supervisor need not have an advanced degree, but should be thoroughly familiar with the student's project, and must be trained in the student's area of research. The Adult Sponsor may act as the Designated Supervisor.

If a student is experimenting with live vertebrates and the animals are in a situation where their behavior or habitat is influenced by humans, the Designated Supervisor must be knowledgeable about the humane care and handling of the animals.

5) The Institutional Review Board (IRB)

An Institutional Review Board (IRB) is a committee that, according to federal regulations (45-CFR-46), must evaluate the potential physical and/or psychological risk of research involving human subjects. All proposed human research must be reviewed and approved by an IRB before experimentation begins. This includes review of any surveys or questionnaires to be used in a project.

Federal regulations require local community involvement, therefore an IRB should be established at the school level to evaluate human research projects. An IRB at the school or ISEF Affiliated Fair level must consist of a minimum of three members.

An IRB must include:

- a) a science educator
- b) a school administrator (preferably, a principal or vice principal),
- c) and one of the following who is knowledgeable and capable of evaluating the physical and/or psychological risk involved in a given study: a medical doctor, physician's assistant, registered nurse, a psychiatrist, psychologist, licensed social worker or licensed clinical professional counselor.

Additional Expertise: If the IRB needs an expert as one of its members and one is not in the immediate area, then documented contact with an external expert is appropriate and encouraged. A copy of the correspondence (e.g. email, fax, etc.) should be attached to Form 4 and can be used as the signature of that expert.

In order to eliminate conflict of interest, the Adult Sponsor, parents, the Qualified Scientist, and the Designated Supervisor who oversee a specific project must not serve on the IRB reviewing that project. Additional members are recommended to help avoid this conflict of interest and to increase the expertise of the committee.

IRBs exist at federally regulated institutions (e.g., universities, medical centers, NIH, correctional facilities). Prisoner advocates must be included on the IRB when research subjects are at a correctional facility. The institutional IRB must initially review and approve all proposed research conducted at or sponsored by that institution. The Adult Sponsor and the local IRB are responsible for ensuring that the project is appropriate for a pre-college student and adheres to the ISEF rules.

An IRB generally makes the final determination of risk. However, in reviewing projects just prior to a fair, if an SRC judges an IRB's decision as inappropriate, thereby placing human subjects in jeopardy, the SRC may override the IRB's decision and the project may fail to qualify for competition.

6) The Affiliated Fair Scientific Review Committee

A Scientific Review Committee (SRC) is a group of qualified individuals that is responsible for evaluation of student research, certifications, research plans and exhibits for compliance with the Rules and pertinent laws and regulations. Local SRCs may be formed to assist the ISEF Affiliated Fair SRC in reviewing and approving projects. The operation and composition of the local and ISEF-Affiliated Fair SRCs must fully comply with the International Rules.

Any proposed research in the following areas must be reviewed and approved BEFORE experimentation: projects involving vertebrates and potentially hazardous biological agents. (Human studies reviewed and approved by a properly constituted IRB do not have to be reviewed by the SRC until the Fair competition.)

ALL projects must be reviewed and approved by the SRC after experimentation and shortly before competition in an ISEF-affiliated Fair competition. (Projects requiring preapproval which were conducted at a regulated research institution (not home or high school, etc.) and which were reviewed and approved by the proper institutional board before experimentation must also be reviewed by the Fair SRC for rules compliance.)

An SRC must consist of a minimum of three persons. The SRC must include:

- a) a biomedical scientist (Ph.D., M.D., D.V.M., D.D.S., or D.O.)
- b) a science educator
- c) at least one other member

Additional Expertise: Many projects will require additional expertise to properly evaluate (for instance, extended knowledge of biosafety or of human risk groups.) If animal research is involved, at least one member must be familiar with proper animal care procedures. If the SRC needs an expert as one of its members and one is not in the immediate area, then documented contact with an external expert is appropriate and encouraged.

In order to eliminate conflict of interest, the Adult Sponsor, parents, the Qualified Scientist, and the Designated Supervisor must not serve on the SRC reviewing that project. Additional members are recommended to help avoid this conflict of interest and to increase the expertise of the committee.

A Scientific Review Committee (SRC) examines projects for the following:

- a) evidence of literature search
- b) evidence of proper supervision
- c) use of accepted and appropriate research techniques
- d) completed forms, signatures and dates showing maximum of one year duration of research and appropriate preapproval dates (when needed)
- e) evidence of search for alternatives to animal use
- f) humane treatment of animals
- g) compliance with rules and laws governing human, animal research and those involving potentially hazardous biological agents
- i) documentation of substantial expansion for continuation projects
- j) compliance with the ISEF ethics statement

7) Other Review Committees

Certain areas of research conducted in a regulated research institution require review and approval by federally mandated committees that have been established at that institution. These committees include:

- a) **Institutional Animal Use and Care Committee (IACUC)**
- b) **Institutional Review Board (IRB)**
- c) **Institutional Biosafety Committee (IBC)**
- d) **Embryonic Stem Cell Research Oversight Committee (ESCRO)**

8) The ISEF Scientific Review Committee (ISEF SRC)

A Scientific Review Committee exists at the Intel ISEF level. The ISEF SRC reviews the forms and the research plan for all projects to ensure that students have followed all applicable Rules.

The ISEF SRC, like an ISEF Affiliated Fair SRC, is made up of a group of adults knowledgeable about research regulations. The ISEF SRC reviews the **Checklist for Adult Sponsor (1)**, **Abstract, Student Checklist (1A)**, **Research Plan and Approval Form (1B)** in addition to all other required forms for students who enter the Intel ISEF. They also identify problems local fairs may be having and work with fair directors and teachers to resolve them.

A fair director or ISEF Affiliated Fair SRC member with any questions regarding the process, should contact the Society for Science & the Public or a member of the ISEF SRC. (See page 3.)

The ISEF SRC is the final authority on projects that are qualified to compete in the Intel ISEF. In some cases, the ISEF SRC may have questions about particular projects. Usually, after students explain their procedures and research to the ISEF SRC, a simple corrective measure is prescribed (e.g., contacting the Designated Supervisor to confirm a detail, or rewriting an abstract for purposes of clarification).

It is important that students retain all original signed forms. Do not send original forms to the Society for Science & the Public.

❖ Human Subjects ❖

When students conduct research with human subjects, the rights and welfare of those participating in the study must be protected. There are federal regulations protecting human subjects that require the prior review of human subjects research by an Institutional Review Board and, in most cases, the informed consent of research subjects. The following rules were developed to help student researchers adhere to the Federal regulations and to, therefore, protect the rights and welfare of both the research subjects and the student researcher.

Rules

- 1) All research projects involving human subjects, including any revisions, must be reviewed and approved by an **Institutional Review Board (IRB)** before the research begins.
 - 2) The use of human subjects in science projects is allowable under the conditions and rules in the following sections. Based upon the Code of Federal Regulations (45 CFR 46), the definition of a **human subject** is a living individual about whom a investigator conducting research obtains (1) data or samples through intervention or interaction with individual(s), or (2) identifiable private information.
 - A) Examples of studies that are considered “human subjects research” and require IRB approval include:
 - Subjects participating in physical activities (e.g., physical exertion, ingestion of any substance, any medical procedure)
 - Psychological, educational and opinion studies (e.g., surveys, questionnaires, tests)
 - Studies in which the researcher is the subject of the research
 - Behavioral observations
 - that involve any interaction with the observed individual(s) or where the researcher has modified the environment (e.g., post a sign, place an object).
 - that occur in a non public or restricted access settings (e.g., day care setting, doctor’s office)
 - that involve the recording of personally identifiable information
 - Data/record review projects that include identifiable data (see #3)
 - B) Examples of projects that are **NOT** considered human subjects research and do not require IRB pre-approval include:
 - Product testing of a student invention that does not pose a health hazard, personal data is not collected and feedback received is a direct reference to the product. It is recommended that Risk Assessment Form (3) be completed.
 - Data/record review studies (e.g., baseball statistics, crime statistics) in which the data are taken from pre-existing data sets that are publicly available or published (see #3-c)
 - 3) Projects involving pre-existing data sets or data obtained through record review fall into one of three categories (a, b, and c below) and must adhere to the regulations detailed below. Pre-existing data set/review projects are projects that do not involve any interaction with human subjects or the collection of any data from a human subject for the purpose of the student’s research project. These projects may involve the student analyzing data given to the student researcher in paper or electronic form.
 - a) Projects in which the data are **not de-identified/anonymous** (e.g., data set that includes patient name, birth date, phone number or other identifying variables; student gathers data from patient files that include identifiers) are considered human subjects projects. These projects require prior IRB review and pre-approval and may require informed consent. Student researchers and adult mentors (Designated Supervisor or Qualified Scientist) should be familiar with and in compliance with all privacy and HIPAA laws.
 - b) Projects in which the student receives the data in a **de-identified/anonymous** format will not require IRB pre-approval, but must comply with BOTH conditions below:
 - i) The professional providing the data must certify in writing that the data have been appropriately de-identified and are in compliance with all privacy and HIPAA laws.
 - ii) During the final SRC review and approval process, the SRC must ensure that the data were appropriately de-identified by review of the written documentation provided by the supervising professional.
 - c) Projects in which the records/data are **publicly available** (print, electronic or internet) do not require IRB review or approval. Examples of such projects include examination of sports teams or individual athlete statistics or crime statistics.
 - 4) When developing the Research Plan, student researchers must evaluate and minimize the physical and/or psychological risks to their human subjects.
 - 5) The documentation of written **Informed Consent** is required for most projects. **Children/Minors participating in most research will require special consent procedures including assent of the child/minor and consent of the parent/guardian.** Children/Minors are persons who have not attained the legal age for consent; in most jurisdictions the legal age is 18 and in some jurisdictions this may include all students still in secondary school.
- Behavioral observations of unrestricted, public settings (e.g., shopping mall, public park) in which **all** of the following apply:
 - The researcher has no interaction with the individuals being observed,
 - The researcher does not manipulate the environment in any way **and**
 - The researcher does not record any personally identifiable data.

- 6) Research conducted by a pre-college student at federally regulated research institutions (e.g., universities, medical centers, NIH, correctional institutions, etc.) must be reviewed and approved by that institution's IRB. A copy of the IRB approval for the entire project (which must include the research procedures/measures the student is using) or an official letter from the IRB attesting to this approval is required. A letter from the mentor is not sufficient documentation of IRB review and approval.
- 7) A student may observe and collect data for analysis of medical procedures and medication administration only under the direct supervision of a qualified professional. The qualified professional must be named in the research protocol to be specifically approved by the IRB. Students are prohibited from administering medications and performing invasive medical procedures on human subjects. The IRB must confirm that the student is not violating the medical practice act of the particular state or nation in which he/she is conducting the research.
- 8) Student researchers may NOT publish or display information in a report that identifies the human subjects directly or through identifiers linked to the subjects, (including photographs), without written consent. (Public Health Service Act, 42, USC 241 (d)).
- 9) All standardized tests that are not in the public domain must be administered, scored and interpreted by a Qualified Scientist as required by the instrument publisher. Any and all use and distribution of the test must be in accordance with the publisher's requirements including procurement of legal copies of the instrument.
- 10) Studies that collect data via use of the internet (e.g., email, web based surveys) require special consideration from the IRB which should have at least one member with professional expertise in conducting human subjects research. The use of the internet and email for data collection will pose challenges in a) collecting anonymous data, b) obtaining informed consent and c) ensuring that participants are of the appropriate age to give informed consent. The research plan and Form 4 must explicitly address how these challenges were evaluated and addressed.

It is permissible to develop a process of obtaining informed consent that is conducive to internet research. Researchers will want to provide information to potential participants about the purpose of the study and nature of their participation, potential risks, the voluntary nature of the study and the participant's right to withdrawal from the study at any time. A sample informed consent statement for adult participants is available on the web at www.societyforscience.org/isef/document/index.asp.

Recruiting and utilizing participants who are under the age of 18 for a research study conducted on the internet is permissible under the two following conditions.

- a. If the IRB has determined that informed consent is required, the parent/legal guardian must give consent through a traditional Form 4 and informed consent procedures. In this situation, parents/guardians review

- and sign a Form 4 before the minor participant completes the online or email survey.
- b. If the IRB determines that informed (parental) consent is not necessary for a study that poses very minimal risk, the student researcher can use an assent procedure similar to the sample consent form available on the web. The researcher should provide information to potential participants describing the nature of the study and what the participant will be asked to do, informing the participant of his/her right to withdrawal at any time and indicating that by typing I AGREE or checking a box on the survey and completing the survey, he/she has agreed to participate in the study.

- 11) After initial IRB/SRC approval, a student with any proposed changes in the **Student Checklist (1A)** and **Research Plan** of the project must repeat the approval process before laboratory experimentation/data collection resumes.

Risk Assessment

Once a study population is chosen, the student researcher must consider any potential physical and/or psychological risks when developing the research plan. In evaluating risk, students and IRBs must use the following federal definition of minimal risk as a guide: **No more than minimal risk exists when the probability and magnitude of harm or discomfort anticipated in the research are not greater (in and of themselves) than those ordinarily encountered in DAILY LIFE or during performance of routine physical or psychological examinations or tests.**

Risk Groups: The following risk groups require additional safeguards because they have been judged as vulnerable to coercion or undue influence:

- 1) Any member of a group that is naturally at-risk (e.g., pregnant women, mentally disabled persons, economically or educationally disadvantaged persons, individuals with diseases such as cancer, asthma, diabetes, cardiac disorders, psychiatric disorders, dyslexia, AIDS, etc.)
- 2) Special vulnerable groups that are covered by federal regulations (e.g. children/minors, prisoners, pregnant women).

Risk Activities: The following are examples of activities that contain **more than minimal risk**:

- 1) **Physical**
 - a. **Exercise** other than ordinarily encountered in DAILY LIFE by that subject.
 - b. **Ingestion, tasting, smelling, application of a substance** or exposure to any potentially hazardous materials.
- 2) **Psychological**
 - a. Any activity (e.g. survey, questionnaire, viewing of stimuli) or experimental condition that could potentially result in **emotional stress**. For example, answering

questions related to personal experiences such as sexual, physical or child abuse, divorce and/or psychological well-being (e.g. depression, anxiety, suicide) must be considered more than minimal risk. Additionally, research activities that involve exposing subjects to stimuli or experimental conditions that could potentially result in emotional stress must also be considered more than minimal risk. Examples include violent or distressing video images, distressing written materials or activities that could potentially result in feelings of depression, anxiety, or low self-esteem in subjects.

- b. Any activity that could potentially result in negative consequences for the subject due to **invasion of privacy or breach of confidentiality**. Confidentiality involves taking careful measures to ensure that the research data and/or responses are not disclosed to the public or unauthorized individuals with identifiable information. When research activities involve collection of personal information (e.g. history of abuse, drug use, opinions, fingerprints) or health-related data (genetic material, blood, tissue) the researcher must consider risks related to invasion of privacy and possible breach of confidentiality. Ways to reduce these risks include collecting data anonymously or developing data collection procedures that make it impossible to link any identifying information (e.g. subject's name) with his/her responses or data. Anonymity involves collecting research data in such a way that it is impossible to connect research data (e.g. responses, questionnaires) with the individual who provided the data. That is, personal identifiers (e.g. names, birthdates, social security numbers) are not collected or linked with the data.

Informed Consent

The process of obtaining informed consent provides information to the subject (and where applicable, parents or guardians) about the risks and benefits associated with participation in the research study and allows the subject (and where applicable, parents or guardians) to make an educated decision about whether or not to participate. Informed consent is an on-going process, not a single event that ends with a signature on a page. It must incorporate procedures that do not involve coercion or deception.

Section A. Informed Consent Required

Documentation of informed consent is required for the following as long as the study does not meet any of the criteria for a waiver as described in Section B.:

- 1) When the IRB determines that a research study involves physical or psychological activities with more than minimal risk.
- 2) When the IRB determines that the project could *potentially* result in emotional stress to a research subject.
- 3) When the IRB determines that the research subjects belong to a risk group and the study does not meet any of the criteria below for a waiver.

Section B. Informed Consent May Be Waived

The IRB may waive the requirement for documentation of written informed consent if the research involves **only minimal risk and anonymous data collection and if it is one of the following:**

- a) Research involving normal educational practices
- b) Research on individual or group behavior or characteristics of individuals where the researcher does not manipulate the subjects' behavior and the study does not involve more than minimal risk.
- c) Surveys and questionnaires that are determined by the IRB to involve perception, cognition, or game theory and do NOT involve gathering personal information, invasion of privacy or potential for emotional distress. If there is any uncertainty regarding the appropriateness of waiving informed consent, it is strongly recommended that informed consent be obtained.
- d) Studies involving physical activity where the IRB determines that no more than minimal risk exists and where the probability and magnitude of harm or discomfort anticipated in the research are not greater than those ordinarily encountered in DAILY LIFE or during performance of routine physical activities.

If the documentation of informed consent is not required or obtained, all subjects must still give their consent/assent to participate in the study. Research subjects under 18 years of age or other individuals not able to give consent (e.g. mentally disabled) give their assent, whereas adults give their consent. The researcher must inform potential subjects about the purpose of the study and what they will be asked to do. The potential subjects must also be informed that their participation is voluntary and that they may withdraw from the study at any time. This information and the consent/assent can be either verbal or written. The procedure for obtaining consent/assent should be included in the research plan.

If a research subject is under 18 years of age, it is recommended that informed consent be obtained. Both the parent/legal guardian and the school age research subject must sign **Human Subjects Form (4)**. However, an IRB may decide that informed consent is not required because of the allowable exceptions listed above. **When the IRB waives informed consent of research subjects under the age of 18 for studies involving surveys or questionnaires, justification of this waiver must be stated on Human Subjects Form (4).**

Review Process

- 1) A student interested in doing a human subjects research project must first **review the rules**, choose a study group and consider the risks of their proposed research. The student must work with their Adult Sponsor who can guide them to a Qualified Scientist, if necessary, to help in the development of their research plan.

- 2) The student must complete the **Student Checklist (1A)**, **Research Plan**, and **Human Subjects Form (4)** and submit this information along with a copy of any questionnaire, survey or instrument used to collect human data to the Institutional Review Board (IRB). Submission of the appropriate forms does not give the student permission to begin the research. The IRB must **sign the Approval Form (1B) and Human Subjects Form (4)**, approving the project, before the research can begin.
- 3) To complete the IRB review process, the IRB must designate the risk-status of the project and other requirements by checking the appropriate box(es) on **Human Subjects Form (4)**. The IRB may require one or more of the following:
 - a. Documentation of written Informed Consent on the **Human Subjects Form (4)**. When the IRB waives informed consent of research subjects under the age of 18 for studies involving surveys or questionnaires, justification of this waiver must be stated on Form 4.
 - b. **Qualified Scientist Form (2)** – The IRB will require the project to be overseen by a Qualified Scientist when there is more than minimal risk involved. If the Qualified Scientist is unable to directly supervise the project, a trained **Designated Supervisor** will also be required.
 - c. Changes to the **Research Plan** – If the IRB requires changes or modifications of the Research Plan, the student must incorporate those changes into the written **Research Plan** before the IRB approves the project.
- 4) After the IRB has approved the project and **all committee members have signed the Human Subjects Form (4)**, the student may begin recruiting and/or interacting with human subjects.
- 5) After experimentation and shortly before fair competition, the SRC reviews and approves previously approved projects to make sure that students followed the approved **Research Plan** and the rules.
- 6) The following forms are required:
 - a. **Checklist for Adult Sponsor (1)**
 - b. **Student Checklist (1A)**
 - c. **Research Plan**
 - d. **Approval Form (1B)**
 - e. **Human Subjects Form (4)**
 - f. **Regulated Research Institution Form (1C)** - if applicable
 - g. **Qualified Scientist Form (2)** - if applicable

❖ Vertebrate Animals ❖

The following rules were developed to help pre-college student researchers adhere to the federal regulations governing professional scientists and to, therefore, protect the welfare of both animal subjects and the student researcher. When students conduct research with animal subjects, the health and well-being of the animal subjects must be considered.

All projects involving vertebrate animals must adhere to the rules below AND to either Section A or Section B rules depending on the nature of the study and the research site.

Rules for ALL Studies Involving Vertebrate Animals

- 1) The use of vertebrate animals in science projects is allowable under the conditions and rules in the following sections. Vertebrate animals, as covered by these rules, are defined as live, nonhuman vertebrate mammalian embryos or fetuses, tadpoles, bird and reptile eggs within three days (72 hours) of hatching, and all other nonhuman vertebrates (including fish) at hatching or birth.
- 2) Alternatives to the use of vertebrate animals for research must be explored and discussed in the research plan. Alternatives include the following “3 R’s”:
 - Replace vertebrate animals with invertebrates, lower life forms, tissue/cell cultures or computer simulations
 - Reduce the number of animals without compromising statistical validity
 - Refine the experimental protocol to lessen pain or distress to the animals.
- 3) **Research projects which cause more than momentary pain or suffering to vertebrate animals or which are designed to kill vertebrate animals are prohibited.** (Note: Humane euthanasia is permitted under certain conditions when the research is conducted at a regulated research institution. See Section B.)
- 4) The following types of studies on vertebrate animals are **prohibited**:
 - a. All induced toxicity studies involving a poison or toxin that could impair health or destroy life, including alcohol, acid rain, insecticide, herbicide, or heavy metals.
 - b. Behavioral experiments involving operant conditioning with aversive stimuli, mother/infant separation or induced helplessness
 - c. Studies of pain
 - d. Predator/vertebrate prey experiments
- 5) Because weight loss is one significant sign of stress, the maximum permissible weight loss or growth retardation (compared to controls) of any experimental or control animal is 15%.
 - 6) If an experimental design requires food or water restriction, it must be appropriate to the species, but may not exceed 18 hours.
 - 7) If there are unexpected deaths in either the experimental or control groups, the cause of the death must be investigated. If the experimental procedure is responsible for the deaths, the experiment must be immediately terminated. A death rate of 30% or greater in any group or subgroup is not permitted and the project will fail to qualify for competition.
 - 8) Students performing vertebrate animal research must follow local, state, country and U.S. federal regulations.
 - 9) Except for observational studies, a Qualified Scientist or Designated Supervisor must directly supervise all research involving vertebrate animals.
 - 10) A Scientific Review Committee (SRC) and/or an Institutional Animal Care and Use Committee (IACUC) must approve all research before experimentation begins. (An IACUC is the review and approval body at a regulated research institution for all animal studies.) The research plan for vertebrate animal studies must include the following:
 - a. Justify why animals must be used, including the reasons for the choice of species and the number of animals to be used. Describe any alternatives to animal use that were considered, and the reasons these alternatives were unacceptable. Explain the potential impact or contribution this research may have on the broad fields of biology or medicine.
 - b. Describe in detail, how the animals will be used. Include methods and procedures, such as experimental design and data analysis. Describe the procedures that will minimize the potential for discomfort, distress, pain and injury to the animals during the course of experimentation. Identify the species, strain, sex, age, weight, source and number of animals proposed for use.
 - 11) Studies involving behavioral observations of animals are exempt from prior SRC review if **ALL** of the following apply:
 - There is no interaction with the animals being observed,
 - There is no manipulation of the environment in any way and
 - All federal or state fish, game and wildlife laws and regulations are followed.
 - 12) Certain types of vertebrate animal studies may be conducted at home, school or other non-regulated research sites, whereas other studies must be conducted at a regulated research institution. See A. Non-regulated Research Site and B. Regulated Research Site below for rules and site descriptions.

A. Additional Rules for Projects Conducted in a Non-regulated Site

Vertebrate animal studies may be conducted at a **non-regulated** research site (home, school, farm, ranch, in the field, etc.). This includes:

- Studies involving animals in their natural environment
 - Studies involving animals in zoological parks
 - Studies involving livestock that use standard agricultural practices.
- 1) These projects must adhere to BOTH of the following guidelines:
 - a. The research involves agricultural, behavioral, observational or supplemental nutritional studies on animals.AND
 - b. The research involves only non-invasive and non-intrusive methods that do not negatively affect an animal's health or well-being.

(Note: All studies not meeting the above criteria must be conducted at a Regulated Research Institution. See Section B. below.)

- 2) Animals must be treated kindly and cared for properly. Animals must be housed in a clean, ventilated, comfortable environment compatible with the standards and requirements appropriate for the species used. They must be given a continuous, clean (uncontaminated) water and food supply. Cages, pens and fish tanks must be cleaned frequently. Proper care must be provided at all times including weekends, holidays, and vacation periods. Animals must be observed daily to assess their health and well-being. A Designated Supervisor is required to oversee the daily husbandry of the animals. The following documents offer space requirements and additional husbandry information:
 - *Federal Animal Welfare Regulation*
 - *Guide for the Care and Use of Laboratory Animals*
 - *Guide for the Care and Use of Agricultural Animals in Agricultural Research and Teaching (Ag-Guide)*
- 3) The Scientific Review Committee must determine when a veterinarian is required to certify that the research plan and animal husbandry are appropriate. This certification is required before experimentation and the prior SRC approval. It is highly recommended that a veterinarian be consulted in experiments that involve supplemental nutrition and/or activities that would not be ordinarily encountered in the animal's daily life.
- 4) If an unexpected illness or emergency occurs, the affected animals must have proper medical and nursing care that is directed by a veterinarian. A student researcher is expected to stop experimentation if there is significant weight loss or death in the experimental subjects. The experiment can only be resumed if the cause of illness or death is not related to the experimental procedures and if appropriate steps are taken to eliminate the causal factors.

- 5) Animals may not be captured from or released into the wild without approval of authorized wildlife or other regulatory officials. Fish may be obtained from the wild only if the researcher releases the fish unharmed, has the proper license, and adheres to state and local fishing laws and regulations.
- 6) The final disposition of the animals must be considered and explained on **Vertebrate Animal Form (5A)**. Euthanasia for tissue removal and/or pathological analysis is not permitted for a project conducted in a non-regulated site.
- 7) After initial SRC approval, a student with any proposed changes in the **Student Checklist (1A)** and **Research Plan** of the project must repeat the approval process before laboratory experimentation/data collection resumes.
- 8) **The following forms are required:**
 - a. **Checklist for Adult Sponsor (1)**
 - b. **Student Checklist (1A)**
 - c. **Research Plan**
 - d. **Approval Form (1B)**
 - e. **Vertebrate Animal Form (5A)**
 - f. **Qualified Scientist Form (2), if applicable**

B. Additional Rules for Projects Conducted in a Regulated Research Institution

All studies not meeting the criteria in Section A. must be conducted in a regulated research institution. A regulated research institution is defined as a professional research/teaching institution that is regularly inspected by the USDA and is licensed to use animals covered by the Animal Welfare Act. Also included are all federal laboratories such as National Institutes of Health, Veteran's Affairs Medical Centers and the Centers For Disease Control. In addition, pharmaceutical and biotechnology companies that utilize research animals that are not covered by the Animal Welfare Act but have an operational Institutional Animal Care and Use Committee and program structured in compliance with U.S. federal laws are included in this definition.

(NOTE: Some research that is permissible for professionals in research institutions is not appropriate for pre-college students.)

- 1) The Institutional Animal Care and Use Committee (IACUC) must approve all student research projects before experimentation begins. Such research projects must be conducted under the responsibility of a principal investigator. The local SRC must also review the project to certify that the research project complies with ISEF Rules. This SRC review should occur before experimentation begins.

- 2) Proper euthanasia at the end of experimentation for tissue removal and/or pathological analysis is permitted. Only the Qualified Scientist or an institutional representative may perform the euthanasia. All methods of euthanasia must adhere to current AVMA Guidelines.
- 3) Research projects that cause more than momentary pain or suffering to vertebrate animals are prohibited. The following table relates the USDA Pain Categories and the permissibility of studies for science fair projects.

USDA Pain Categories	Definition	ISEF Guidelines
Category A	<i>Live animals will receive non-painful manipulation. Animals may be euthanized to obtain tissues, cells, etc.</i>	Permitted
Category B	<i>Live animals will receive momentary pain or stressful stimulus without anesthesia, which results in a short-term response. Examples include but are not limited to: injections, field trapping/tagging, blood sampling and standard agricultural husbandry practices.</i>	Permitted
Category C	<i>Live animals will have significant manipulations, surgery, etc., performed while anesthetized. The animals will be euthanized at the termination of the procedure without regaining consciousness.</i>	Permitted only with proper training and certification
Category D	<i>Live animals will have manipulations performed while anesthetized and are allowed to recover and/or animals will develop discernable clinical signs indicating pain, distress, or significant physiological changes <u>spontaneously</u> or <u>as a result of specific experimental procedures</u>. Examples include, but are not limited to: Survival surgical procedures of any type and some studies which would include tumor development. ALL SUCH STUDIES MUST INCLUDE TREATMENT TO ALLEVIATE PAIN OR DISTRESS.</i>	Limited Category D procedures are permitted with proper training and certification. The project must adhere to all ISEF rules. Most Category D projects would be deemed inappropriate for high school students.
Category E	<i>Live animals will experience significant/severe pain or distress, without benefit of anesthetics, tranquilizers or analgesics.</i>	PROHIBITED

- 4) Research in nutritional deficiency, ingestion, inoculation or exposure to unknown or potentially hazardous materials or drugs is permitted to proceed only to the point where the first sign of the deficiency or effect appear. Appropriate measures must then be taken to correct the deficiency or drug effect, if such action is feasible. If not, the animal(s) must be euthanized.
- 5) The following forms are required:
 - a. **Checklist for Adult Sponsor (1)**
 - b. **Student Checklist (1A)**
 - c. **Research Plan**
 - d. **Approval Form (1B)**
 - e. **Regulated Research Institution Form (1C)**
 - f. **Vertebrate Animal Form (5B)**
 - g. **Qualified Scientist Form (2)**

❖ Potentially Hazardous Biological Agents ❖

(includes rules involving microorganisms, rDNA, and human and vertebrate animal tissues)

Projects involving microorganisms (including bacteria, viruses, viroids, prions, rickettsia, fungi, and parasites), **recombinant DNA (rDNA) technologies** or **human or animal fresh/frozen tissues, blood, or body fluids** may involve working with potentially hazardous biological agents. Students are permitted to do research projects with potentially hazardous biological agents as long as every effort is made to ensure that they work safely and that the projects meet the conditions and rules described below. The following rules were developed to protect students and to help them adhere to federal and international biosafety regulations and guidelines.

When dealing with potentially hazardous biological agents it is the responsibility of the student and all of the adults involved in a research project to conduct and document a **risk assessment** to define the potential level of harm, injury or disease to **plants, animals and humans** that may occur when working with biological agents. The risk assessment determines a **final biosafety level** which then determines the laboratory facilities, equipment, training, and supervision required for the research project to proceed. See page 23.

All projects involving microorganisms, recombinant DNA technologies and human or animal fresh/frozen tissues, blood or body fluids must adhere to the rules below AND, depending on the study, to the additional rules in Section A, B or C.

Rules for ALL Studies Involving Potentially Hazardous Biological Agents

- 1) The use of potentially hazardous microorganisms (including bacteria, viruses, viroids, prions, rickettsia, fungi, and parasites), recombinant DNA (rDNA) technologies or human or animal fresh/frozen tissues, blood, or body fluids is allowable under the conditions and rules that follow. All of these areas of research may involve potentially hazardous biological agents and require special precautions.
- 2) An appropriate review and approval committee (SRC, IBC, IACUC) must approve all research before experimentation begins. The initial risk assessment determined by the student researcher and adults supervising the project must be confirmed by the SRC.
- 3) Experimentation involving culturing of potentially hazardous biological agents, even BSL-1 organisms, **is prohibited in a home environment**. However, specimens are allowed to be collected at home as long as they are immediately transported to a laboratory with the appropriate level of biosafety containment.
- 4) Naturally-occurring plant pathogens may be studied (not cultured) at home, but may not be introduced into a home/garden environment.
- 5) A risk assessment must be conducted by the student and adult supervisors prior to experimentation and a final biosafety level must be determined or confirmed by the SRC. See page 23.
- 6) Research determined to be at Biosafety Level 1 (BSL-1) may be conducted in a BSL-1 or higher laboratory. The research must be supervised by a Qualified Scientist or a trained Designated Supervisor. The student must be properly trained in standard microbiological practices.
- 7) Research determined to be a Biosafety Level 2 (BSL-2) **MUST** be conducted in a laboratory rated BSL-2 or above (commonly found in a regulated research institution). The research must be reviewed and approved by the Institutional Biosafety Committee (IBC) or a letter obtained from an institutional representative that the research does not require review. The research must be supervised by a Qualified Scientist. The student researcher must receive extensive training, demonstrate competency and be directly supervised while conducting microbiological procedures.
- 8) **Research determined to be biosafety levels 3 or 4 is prohibited for precollege students.**
- 9) **Studies intended to produce or genetically engineer bacteria with multiple antibiotic resistance are prohibited.** Extreme caution should be exercised when selecting out antibiotic resistant organisms. Studies using such organisms require at least BSL-2 containment.
- 10) All potentially hazardous biological agents must be properly disposed of at the end of experimentation in accordance with their biosafety level. Following are acceptable procedures for disposal of cultured materials: Autoclaving at 121 degrees Celsius for 20 minutes, use of 10% sodium hypochlorite, incineration, alkaline hydrolysis, and biosafety pick-up.
- 11) Studies involving the culturing of human or animal waste, including sewage sludge, must be treated as a BSL-2 study.
- 12) The following types of studies are exempt from prior SRC review
 - A. No additional forms required:
 - 1) Studies involving baker's yeast and brewer's yeast, except when involved with rDNA studies
 - 2) Commercially-available coliform water test kits
 - 3) Studies involving Lactobacillus, Bacillus thurgensis, nitrogen-fixing, oil-eating bacteria and algae-eating bacteria introduced into their natural environment. (Not exempt if cultured in a petri dish environment that could potentially be contaminated).
 - B. Require completed Risk Assessment Form 3:
 - 1) Studies involving protists, archae and similar microorganisms
 - 2) Research using manure for composting or other non-culturing experiments and fuel production.
- 13) Any proposed changes in the **Student Checklist (1A)** and **Research Plan** by the student after initial SRC approval must have subsequent SRC or IBC review and approval before such changes are made and before experimentation resumes.
- 14) The following forms are required:
 - a. **Checklist for Adult Sponsor (1), Student Checklist (1A), Research Plan, and Approval Form (1B)**
 - b. **Regulated Research Institution Form (1C)** - if appl.
 - c. **Qualified Scientist (2)**, if applicable
 - d. **Risk Assessment (3)**, if applicable
 - e. **PHBA Risk Assessment Form (6A)**
 - f. **Human and Vertebrate Animal Tissue Form (6B)** – for all studies involving tissues and body fluids.

A. Additional Rules for Projects Involving Unknown Microorganisms

Studies involving unknown microorganisms present a challenge because the presence, concentration and pathogenicity of possible agents are unknown. In science fair projects these studies typically involve the collection and culturing of microorganisms from the environment (e.g. soil, household surfaces, skin, etc.)

- 1) Research with unknown microorganisms can be treated as a BSL-1 study under the following conditions:
 - a) Organism **is cultured** in a plastic Petri dish (or other standard non-breakable container) **and sealed**. Other acceptable containment include petri film and doubled heavy-duty (2-ply) sealed bags.
 - b) Experiment involves only procedures in which the Petri dish remains sealed throughout the experiment (i.e. counting presence of organisms or colonies).
 - c) The sealed Petri dish is disposed of in the appropriate manner under the supervision of the Designated Supervisor.
- 2) If a culture is opened for identification, sub-culturing or isolation, it must be treated as a BSL-2 study and involve BSL-2 laboratory procedures.

B. Additional Rules for Projects Involving Recombinant DNA (rDNA) Technologies

Studies involving rDNA technologies in which microorganisms have been genetically modified require close review to assess risk level assignment. There are a few rDNA studies that can be safely conducted in a BSL-1 high school laboratory with prior review by a knowledgeable SRC.

- 1) All rDNA technology studies involving BSL-1 organisms and BSL-1 host vector systems may be conducted in a BSL-1 laboratory under the supervision of a Qualified Scientist or trained Designated Supervisor and must be approved by the SRC prior to experimentation. Examples include cloning of DNA in *E. coli K12*, *S. cerevisiae*, and *B. subtilis* host-vector systems.
- 2) Commercially available rDNA kits using BSL-1 organisms may be conducted in a BSL-1 laboratory under the supervision of a qualified scientist or trained designated supervisor and must be approved by the SRC prior to experimentation.
- 3) A rDNA technology study that involves BSL-1 agents that may convert to BSL-2 agents during the course of experimentation must be conducted entirely in a BSL-2 facility.
- 4) All rDNA technology studies involving BSL-2 organisms and/or BSL-2 host vector systems must be conducted in a regulated research institution and approved by the IBC prior to experimentation.
- 5) **Propagation of recombinants containing DNA coding for oncogenes or other human, plant or animal toxins (including viruses) are prohibited.**

C. Additional Rules for Projects Involving Tissues & Body Fluids, including Blood and Blood Products

Studies involving fresh/frozen tissue, blood or body fluids obtained from humans and/or vertebrate may contain microorganisms and have the potential of causing disease. Therefore, a proper risk assessment is required.

- 1) If tissues are obtained from an animal that was sacrificed for a purpose other than the students' project, it may be considered a tissue study. Documentation of the IACUC approval for the original animal study from which tissues are obtained is required.
- 2) If the animal was euthanized solely for the student's project, the study must be considered a vertebrate animal project and adhere to the vertebrate animal rules for studies conducted at a regulated research institution. (See vertebrate animal rules, pg 17.)
- 3) Biosafety level 1 studies involve the collection and examination of fresh/frozen tissue and/or body fluids, (not including blood or blood products, see rule 5) from a non-infectious source with little likelihood of microorganisms present. Biosafety level 1 studies can be conducted in a BSL-1 laboratory and must be supervised by a Qualified Scientist or trained Designated Supervisor.
- 4) Biosafety level 2 studies involve the collection and examination of fresh/frozen tissues or body fluids that may contain microorganisms belonging to BSL-1 or 2. These studies must be conducted in a regulated research institution under the supervision of a Qualified Scientist.
- 5) All studies involving human or wild animal blood or blood products should be considered a Biosafety level 2 study and must be conducted in a BSL-2 laboratory under the supervision of a Qualified Scientist. All studies involving domestic animal blood may be considered a BSL-1 level study. All blood must be handled in accordance with standards and guidelines set forth in the OSHA, 29CFR, Subpart Z. Any tissue or instruments with the potential of containing bloodborne pathogens (eg. blood, blood products, tissues that release blood when compressed, blood contaminated instruments) must be properly disposed of after experimentation.
- 6) Human breast milk of unknown origin, unless certified free of HIV and Hepatitis C and domestic unpasteurized animal milk are considered BSL-2. Pasteurized domestic animal milk may be considered BSL-1.
- 7) Any study involving the collection and examination of body fluids which may contain biological agents belonging to BSL-3 or 4 is prohibited for precollege students.
- 8) Studies of human body fluids, where the sample can be identified with a specific person, must have IRB review and informed consent. Students using their own body fluids are exempt from this requirement.
- 9) Studies involving human embryonic human stem cells must be conducted in a registered research institution and reviewed and approved by the ESCRO (Embryonic Stem Cell Research Oversight) Committee.

- 10) The following types of tissue do not need to be treated as potentially hazardous biological agents:
- Plant tissue
 - Established cell and tissue cultures (e.g., obtained from the American Type Culture Collection). The source and catalog number of the cultures should be identified in the Research Plan

- Meat or meat by-products obtained from food stores, restaurants, or packing houses
- Hair
- Teeth that have been sterilized to kill any blood borne pathogen that may be present. Chemical disinfection or autoclaving at 121 degrees Celsius for 20 minutes is a recommended procedure.
- Fossilized tissue or archeological specimens
- Prepared fixed tissue

Risk Assessment

(Use this information to complete PHBA Risk Assessment Form 6A)

Risk assessment defines the potential level of harm, injury or disease to **plants, animals and humans** that may occur when working with biological agents. The end result of a risk assessment is the assignment of a final biosafety level which then determines the laboratory facilities, equipment, training, and supervision required for the research project to proceed.

Risk assessment involves:

- **Assignment of the biological agent to a risk group**
 - Studies involving a known microorganism should begin with an initial assignment of the microorganism to a biosafety level risk group based on information available through a literature search.
 - The study of unknown microorganisms and the use of fresh tissues should rely on the expertise of qualified adults supervising the project.
- Determination of the **level of biological containment** available to the student researcher to conduct the

experimentation. (Please see Levels of Biological Containment below for more details.)

- Assessment of the experience and **expertise of the adult(s)** supervising the student.
- **Assignment of a final biosafety level** for the study based on risk group of biological agent, level of biological containment available and the expertise of the Qualified Scientist or Designated Supervisor who will be supervising the project.

If a study is conducted at a non regulated site (e.g. school), the final biosafety level must be confirmed by the SRC. If the research is conducted at a regulated site, the final biosafety level must be assigned by an Institutional Biosafety Committee (IBC) or equivalent approval body or a letter obtained from an institutional representative that the research does not require review. If no approval body exists at the regulated site, the SRC should review the project and assign a final biosafety level.

Classification of Biological Agents Risk Groups

Biological agents, plant or animal, are classified according to biosafety level risk groups. These classifications presume ordinary circumstances in the research laboratory, or growth of agents in small volumes for diagnostic and experimental purposes.

BSL-1 risk group contains biological agents that pose low risk to personnel and the environment. These agents are highly unlikely to cause disease in healthy laboratory workers, animals or plants. The agents require Biosafety Level 1 containment. Examples of BSL-1 organisms are: *Aspergillus niger*, *Escherichia coli* strain K12, *Agrobacterium tumefaciens*, *Micrococcus leuteus*, *Neurospora crassa*, *Pseudomonas fluorescens*, *Serratia marcescens*.

BSL-2 risk group contains biological agents that pose moderate risk to personnel and the environment. If exposure occurs in a laboratory situation, the risk of spread is limited and it rarely would cause infection that would lead to serious disease. Effective treatment and preventive measures are available in the event that an infection occurs. The agents require Biosafety Level 2 containment. Examples of BSL-2 organisms are: *Mycobacterium*, *Streptococcus pneumoniae*, *Salmonella choleraesuis*.

BSL-3 risk group contains biological agents that usually cause serious disease (human, animal or plant) or that can result in serious economic consequences. **PROHIBITED**

BSL-4 risk group contains biological agents that usually produce very serious disease (human, animal or plant) that is often untreatable. **PROHIBITED**

Levels of Biological Containment

There are four levels of biological containment (Biosafety Level 1 - 4). Each level has guidelines for laboratory facilities, safety equipment and laboratory practices and techniques.

BSL-1 containment is normally found in water-testing laboratories, in high schools, and in colleges teaching introductory microbiology classes. Work is done on an open bench or in a fume hood. Standard microbiological practices are used when working in the laboratory. Decontamination can be achieved by treating with chemical disinfectants or by steam autoclaving. Lab coats are required and gloves recommended. The laboratory work is supervised by an individual with general training in microbiology or a related science.

BSL-2 containment is designed to maximize safety when working with agents of moderate risk to humans and the environment. Access to the laboratory is restricted. Biological safety cabinets (Class 2, type A, BSC) must be available. An autoclave should be readily available for decontaminating waste materials. Lab coats, gloves and face protection are required. The laboratory work must be supervised by a competent scientist who understands the risk associated with working with the agents involved.

BSL-3 containment is required for infectious agents that may cause serious or potentially lethal diseases as a result of exposure by inhalation. **PROHIBITED**

BSL-4 containment is required for dangerous/exotic agents that pose high risk of life-threatening disease. **PROHIBITED**

❖ Hazardous Chemicals, Activities or Devices ❖

(Includes DEA-controlled substances, prescription drugs, alcohol & tobacco, firearms and explosives, radiation, lasers, etc.)

The following rules apply to research that involves the use of hazardous chemicals, devices and activities. The rules include substances and devices that are regulated by local, state, country, or international law, most often with restrictions of their use by minors such as DEA-controlled substances, prescription drugs, alcohol and tobacco and firearms and explosives. Hazardous activities are those that involve a level of risk above and beyond that encountered in the student's everyday life.

These rules are intended to protect the student researcher by ensuring that the proper supervision is provided and that all potential risks are considered so that the appropriate safety precautions are taken. Before beginning research involving hazardous chemicals, activities or devices, be sure to check with your school, local, or regional fair as more strict rules and guidelines may be in effect.

Rules for ALL Projects Involving Hazardous Chemicals, Activities and Devices

- 1) The use of hazardous chemicals and devices and involvement in hazardous activities require direct supervision by a Designated Supervisor, except those involving DEA-controlled substances which require supervision by a Qualified Scientist.
- 2) The student researcher **must conduct a risk** assessment in collaboration with a Designated Supervisor or Qualified Scientist prior to experimentation. This risk assessment is documented on the **Risk Assessment Form (3)**.
- 3) Student researchers must acquire and use regulated substances in accordance with all local, state, U.S. federal and country laws. For further information or classification for these laws and regulations, please contact the regulatory agencies listed below.
- 4) For all chemicals, devices or activities requiring a Federal and/or State Permit, the student/supervisor will be expected to have the permit prior to the onset of experimentation. A copy of the permit should be available for review by adults supervising the project and/or the Scientific Review Committee in their review prior to competition.
- 5) The student researcher must design experiments to minimize the impact that an experiment has on the environment, for instance using minimal quantities of chemicals that must subsequently be disposed of in an environmentally safe manner in accordance with good laboratory practices.
- 6) The following forms are required:
 - a. **Checklist for Adult Sponsor (1)**
 - b. **Student Checklist (1A)**
 - c. **Research Plan**
 - d. **Approval Form (1B)**
 - e. **Regulated Research Institution Form (1C)** - if applicable
 - f. **Qualified Scientist Form (2)** - if applicable
 - g. **Risk Assessment Form (3)**

Additional Rules for Specific Regulated Substances

There are additional rules for the following regulated substances:

- A. DEA-controlled Substances
- B. Prescription Drugs
- C. Alcohol & Tobacco
- D. Firearms and Explosives

A. DEA-Controlled Substances

The U.S. Drug Enforcement Administration (DEA) regulates a number of chemicals that can be diverted from their regular use to make illegal drugs. Other countries may have similar regulatory bodies; students outside of the U.S. should consult the drug regulatory agency in their country in addition to being aware of DEA regulations. DEA-controlled substances and their schedule number can be found at the DEA website listed in the Sources of Information at the end of the section. If a student is uncertain whether chemicals involved in a project are controlled by the DEA, he/she should consult the listing of DEA-controlled substances.

- 1) All studies using DEA-controlled substances must be supervised by a Qualified Scientist who is licensed by the DEA (or other appropriate international regulatory body) for use of the controlled substance.
- 2) All studies using DEA Schedule 1 substances must have the research protocol approved by DEA before research begins. Schedule 2, 3 and 4 substances do not require protocol approval by DEA.

B. Prescription Drugs

Prescription drugs are drugs regulated by federal or country laws and are available only through a pharmacy to protect against inappropriate or unsafe use. Therefore, special precautions must be taken in their use for a science project.

- 1) Students are prohibited from administering prescription drugs to human subjects. (see p. 14)
- 2) Administering any prescription drug to vertebrate animals must be done under all appropriate vertebrate animal rules and guidelines. (see p. 17)

C. Alcohol and Tobacco

The U.S. Alcohol and Tobacco Tax and Trade Bureau (TTB) regulates the production of alcohol and distribution of alcohol and tobacco products. Many such products have an age restriction for purchase, possession and consumption. Students outside of the U.S. must additionally adhere to their local and country laws and regulations.

The Designated Supervisor is responsible for the acquisition, usage and appropriate disposal of the alcohol or tobacco used in the study.

- 1) Production of ethyl alcohol is allowable in the home under the supervision of the parents and must meet the TTB home production regulations.

- 2) Yeast fermentation studies in which minute quantities of ethyl alcohol are produced are permitted.
- 3) Students are allowed to conduct science fair experiments involving the distillation of alcohol for fuel production. However, to do so, the work must be conducted at school and a TTB permit must be obtained by school authorities. Details regarding this process are available from the Alcohol and Tobacco Tax and Trade Bureau (TTB) website referenced in the Sources of Information section below.

D. Firearms and Explosives

The U.S. Bureau of Alcohol, Tobacco, Firearms and Explosives (ATF), along with state agencies, regulates the purchase and use of firearms and explosives. A firearm is defined as a small arms weapon from which a projectile is fired by gunpowder. An explosive is any chemical compound, mixture or device, the primary purpose of which is to function by explosion. Explosives include, but are not limited to, dynamite, black powder, pellet powder, detonators, and igniters.

The purchase of a firearm by a minor is generally unlawful. The use of a firearm, without proper state certification, is illegal. Students should check the training and certification requirements of individual states and countries.

- 1) Projects involving firearms and explosives are allowable when conducted with the direct supervision of a Designated Supervisor and when in compliance with all federal, state and local laws.
- 2) A fully assembled rocket motor, reload kit or propellant modules containing more than 62.5 grams of propellant are subject to the permitting, storage and other requirements of federal explosive laws and regulations.

Note: A “potato gun” is not a firearm unless it is intended to be used as a weapon. A “potato” gun used in a science fair project should be treated as a hazardous device.

Guidance for Risk Assessment

Please find below guidance on conducting risk assessment when using the following:

- A. Hazardous Chemicals
- B. Hazardous Devices
- C. Radiation

A. Hazardous Chemicals

A proper risk assessment of chemicals should include review of factors such as the degree of toxicity, reactivity, flammability or corrosiveness.

Toxicity – the tendency of a chemical to be hazardous to health when inhaled, swallowed, injected or in contact with the skin

Reactivity - the tendency of a chemical to undergo chemical change

Flammability – the tendency of a chemical to give off vapors which readily ignite when used under normal working conditions

Corrosiveness – the tendency of a chemical, upon physical contact, to harm or destroy living tissues or physical equipment.

When doing a risk assessment the type and amount of exposure to a chemical must be considered. For example, an individual’s allergic and genetic disposition may have an influence on the overall effect the chemical may have. The student researcher must refer to Material Safety Data Sheets (MSDS) to ensure that proper safety precautions are taken. Some MSDS sheets (e.g., Flinn) rank the degree of hazard associated with a chemical. This rating may assist students and adult sponsors in determining risk associated with the use of a chemical.

A risk assessment must include proper disposal methods for the chemicals used in an experiment. The Flinn Catalog (referenced below) provides good information for the proper disposal of chemicals. If applicable, the student researcher must incorporate in the research plan disposal procedure required by federal and state guidelines.

Environmentally Responsible Chemistry

The mission of environmentally responsible (green) chemistry is to avoid the use or production of hazardous substances during chemical process. The principles of green chemistry are described on the EPA website in the Sources of Information section. Whenever possible the following principles should be incorporated into the research plan.

- Prevent waste
- Use safer chemicals and products
- Design less hazardous chemical syntheses
- Use renewable materials
- Use catalysts
- Use safer solvents and reaction conditions
- Increase energy efficiency
- Minimize the potential for accident

B. Hazardous Devices

A risk assessment for the use of hazardous devices must consider all potential risks for the student researcher using the device. While many household items (iron, saw, drill, etc.) can be hazardous if used improperly, the documentation of a risk assessment (Form 3) is required when a student researcher works with potentially dangerous laboratory equipment and other devices that require a moderate to high level of expertise to ensure their safe usage.

Certain laboratory equipment may present a greater risk than other equipment. For example, hot plates and Bunsen burners may not require a documented risk assessment, whereas other devices such as high vacuum equipment, heated oil baths, NMR equipment, UV lights, lasers and high-temperature ovens require documentation of a risk assessment (Form 3.)

C. Radiation

A risk assessment must be conducted when a student uses **non-ionizing radiation** beyond that normally encountered in everyday life. Non-ionizing radiation includes the spectrum of ultraviolet (UV), visible light, infrared (IR), microwave (MW), radiofrequency (RF) and extremely low frequency (ELF). Lasers usually emit visible, ultraviolet or infrared radiation. Lasers are classified into four classes based upon their safety. Manufacturers are required to label Classes II – IV lasers.

- Class I lasers are those found in CD players, laser printers, geological survey equipment and some laboratory equipment. There are no known risks associated with using a class 1 laser.
- Class II lasers are found in laser pointers, aiming and range finding devices and pose a risk if the beam is directly viewed over a long period of time.
- Class III lasers are found in higher powered laser pointers, printers and spectrometers. They are to be considered hazardous devices which can cause eye damage when the beam is directly viewed even for a short period of time.
- Class IV lasers are high powered lasers used in surgery, research, and industrial settings. They are extremely hazardous and can cause eye and skin damage from both direct and indirect exposure. The beam is also a fire hazard.

A risk assessment must be conducted when a student uses **ionizing radiation** beyond that normally encountered in everyday life. Projects involving radionuclides (radioisotopes) and X-rays must involve a careful examination of the risks associated with the study. Depending upon the level of exposure, radiation released from these sources can be a health hazard. Most research institutions have a Radiation Safety Office which oversees the use of ionizing radiation and ensures compliance with state and federal regulations.

Information on Required Abstract & Certification for ALL Projects at the Intel ISEF

** This form may not be relevant for your regional or state fair; please refer to instructions from your affiliated fair.**

In ADDITION to the basic form requirements for ALL Projects and any other requirements due to specific areas of research, an Abstract & Certification is required at the conclusion of research. Details on this requirement follow.

Completing the Abstract

After finishing research and experimentation, you are required to write a (maximum) 250 word, one-page abstract. This should be written on the Official Abstract and Certification Form as provided by Society for Science & the Public. The abstract **should include the following:**

- a) *purpose of the experiment*
- b) *procedure*
- c) *data*
- d) *conclusions*

It may also include any possible research applications. Only minimal reference to previous work may be included. An abstract **must not include the following:**

- a) *acknowledgments (including naming the research institution and/or mentor with which you were working), or self-promotions and external endorsements*
- b) *work or procedures done by the mentor*

Completing the Certification

At the bottom of the Abstract & Certification form there are five questions. Please read each carefully, answer appropriately, and sign in the signature box to certify your answers. The Intel ISEF Scientific Research Committee will review and approve the abstract and answers to the questions.

Revisions or questions will be resolved via an SRC appointment on site at the Intel ISEF. Please bring a copy of your Abstract & Certification to the fair. Only after final Intel ISEF SRC approval has been obtained via a stamped/embossed copy of this Abstract & Certification may a Finalist make copies to hand out to the judges and the public.
